(Approved by UGC & Govt. of Maharashtra)

School of Computer Science & Application
Department of Computer Science & Engineering

CERTIFICATE

This is to certify that the project report submitted entitled
“(Project Title)”

By

(Vijay Shivaji Yadav)

PRN NO: 21SC221491044

Program: MCA Class: SYMCA

is work done by him/her and submitted during **2022-2023** academic year, in partial
fulfilment of the requirements for **Capstone Project**

Project Guide

Department Coordinator/HoD

Head of School

External Examiner

SANJAY GHODAWAT UNIVERSITY

Kolhapur

(Approved by UGC & Govt. of Maharashtra)

Declaration

I the undersigned solemnly declare that the report of the project work entitled “_____” which is carried out during my Capstone Project under the supervision of _____, the statements made and conclusions drawn are an outcome of the project work. I further declare that to the best of my knowledge and belief that the project report does not contain any part of any work which has been submitted for the award of any other degree/diploma/certificate in this University or any other University.

Student Name: Vijay Shivaji Yadav

Class: SYMCA

ACKNOWLEDGMENT

First, I would like to thank my Head of the School **Dr. B. Suresh Kumar** for constructive criticism throughout my project. I would like to thank Project co-ordinator **Mrs. Swati Patil** and Department Project Guide **Ms. Vanchala Sutar** for support and advices to get and complete internship in above said organization. It is indeed with a great sense of pleasure and immense sense of gratitude that I acknowledge the help of these individuals. I am extremely grateful to my department staff members and friends who helped me in successful completion of this project.

ABSTRACT

The online grocery shop website allows users to create an account by registering with their personal details such as name, contact information, and address. Authentication mechanisms ensure secure access to the website, protecting users' personal information and transactions. The website provides an intuitive interface that enables users to browse through a comprehensive catalog of grocery products. A search functionality allows customers to quickly find specific items or filter products based on categories, brands, or dietary preferences. Detailed product pages provide essential information about each item, including images, descriptions, ingredients, nutritional facts, and pricing. Customers can also access product reviews and ratings from other users, assisting them in making informed purchase decisions. Customers can add desired products to their virtual shopping cart, simulating the experience of a physical store. The shopping cart allows users to manage quantities, remove items, and calculate the total cost. Additionally, a wishlist feature enables users to save items for future reference or purchase. The online grocery shop website provides various customer support channels, such as live chat, email, or phone, to address user queries, provide assistance, and handle concerns related to orders, refunds, or product inquiries. Responsive customer support helps build trust and loyalty among users.

Chapter 1: Introduction

1.1 Introduction

In today's fast-paced world, online grocery shopping has emerged as a popular and convenient alternative to traditional brick-and-mortar grocery stores. With the increasing availability of internet access and advancements in e-commerce technology, customers can now conveniently browse, select, and purchase their groceries from the comfort of their own homes. This introduction highlights the significance of online grocery shop websites and their ability to transform the way people buy groceries.

Gone are the days of rushing through crowded supermarket aisles, waiting in long checkout lines, and carrying heavy bags of groceries. The advent of online grocery shopping has revolutionized the way we fulfill our daily food and household needs. By leveraging the power of the internet, online grocery shop websites offer a seamless shopping experience, saving customers valuable time and effort.

The convenience of online grocery shopping is one of its most appealing aspects. Customers can access a vast array of grocery products with just a few clicks, eliminating the need to physically visit multiple stores to find what they need. From fresh produce, pantry staples, and dairy products to cleaning supplies and personal care items, everything is available at their fingertips.

In conclusion, online grocery shop websites have revolutionized the way we shop for groceries. With their convenience, extensive product selections, personalized recommendations, and secure transactions, these websites have become an integral part of many people's lives. By offering a seamless shopping experience and eliminating the hassle of traditional grocery shopping, online grocery shop websites cater to the evolving needs and demands of modern consumers, providing them with a convenient and efficient way to meet their everyday grocery requirements..

1.2 Problem Definition

1. **Limited Product Availability:** Online grocery shop websites need to ensure that they offer a wide range of products to cater to the diverse needs and preferences of their customers. Insufficient product variety or out-of-stock items can be frustrating for users and may lead them to seek alternative platforms.
2. **Inaccurate Product Information:** Providing accurate and detailed information about grocery products is crucial. Incomplete or misleading descriptions, missing nutritional information, or incorrect pricing can create confusion and result in dissatisfaction among users.
3. **Difficulty in Navigation and Search:** A poorly designed user interface, complicated navigation, or ineffective search functionality can hinder users' ability to find and select the desired products quickly. Users may become frustrated and abandon the website if they struggle to locate what they need.
4. **Delivery Issues:** Timely and reliable delivery is critical for online grocery shopping. Problems such as delayed deliveries, incorrect orders, or damaged products can significantly impact the user experience. Ensuring efficient logistics and addressing these delivery-related issues is vital for customer satisfaction.
5. **Customer Support and Issue Resolution:** Prompt and reliable customer support is crucial in addressing user queries, resolving problems, and handling complaints. Insufficient or unresponsive customer support can leave users feeling frustrated and dissatisfied with their overall experience.

By identifying and addressing these problem areas, online grocery shop websites can enhance their functionality, user experience, and overall customer satisfaction. Continuous improvement and adaptation to user needs are essential to stay competitive in the rapidly evolving online grocery shopping landscape.

1.3 Objective

1. **Convenience:** The website aims to offer customers the convenience of shopping for groceries from anywhere, at any time. By eliminating the need to visit physical stores, customers can save time and effort, making the grocery shopping experience more efficient and hassle-free.
2. **Extensive Product Selection:** The website strives to provide a comprehensive catalog of grocery products, catering to a wide range of dietary preferences, including organic, glutenfree, vegan, and more. Ensuring a diverse and extensive product selection allows customers to find all their desired items in one place, simplifying their shopping process.
3. **User-Friendly Interface:** The website focuses on providing a user-friendly interface that is intuitive and easy to navigate. Clear categorization, effective search functionality, and informative product pages enable users to find and select their desired products quickly and efficiently.
4. **Accurate and Detailed Product Information:** The website aims to provide accurate and detailed information about each product, including descriptions, nutritional facts, ingredients, and pricing. By ensuring transparent and reliable product information, customers can make informed decisions and feel confident in their purchases.
5. **Responsive Customer Support:** Providing responsive and reliable customer support is crucial. The website strives to address user queries, resolve issues, and handle concerns promptly and effectively, ensuring a positive customer experience and building trust.

Overall, the objective of an online grocery shop website is to leverage technology and innovation to simplify and enhance the grocery shopping experience. By meeting customer expectations for convenience, selection, information accuracy, secure transactions, and reliable delivery, the website aims to become the go-to platform for customers to meet their grocery needs online.

1.4 Scope

- **Product Catalog:** The website includes a diverse and extensive product catalog that covers various categories, including fresh produce, pantry staples, dairy products, beverages, personal care items, household essentials, and more. The catalog is regularly updated to ensure availability and offer a wide range of options to customers.
- **User Registration and Authentication:** The website allows users to register and create an account, providing them with personalized features such as saved preferences, order history, and recommendations. Secure authentication mechanisms protect user accounts and ensure privacy.
- **User Interface and Navigation:** The website features a user-friendly interface with intuitive navigation, clear categorization, and effective search functionality. Users can easily browse through different categories, view product details, and find specific items using search filters.
- **Product Details and Reviews:** Each product is accompanied by detailed information, including images, descriptions, nutritional facts, ingredients, pricing, and customer reviews. This enables customers to make informed decisions and assess the quality and suitability of products.
- **Shopping Cart and Wishlist:** The website allows users to add products to their virtual shopping cart, manage quantities, remove items, and calculate the total cost. Users can also create a wishlist to save desired products for future reference or purchase.
- **Secure Checkout and Payment:** The website ensures a secure checkout process, where users can review their cart, select delivery options, and provide payment details. Integration with trusted payment gateways ensures secure transactions and various payment methods to accommodate customer preferences.

Chapter 2: Literature Review & Problem Identification

2.1 Literature Review

- **Convenience and Time-Saving:** Many studies highlight the convenience and time-saving benefits of online grocery shopping. They emphasize how online grocery shop websites enable customers to avoid traveling to physical stores, waiting in queues, and carrying heavy bags. The convenience factor is often cited as one of the primary reasons why consumers choose to shop for groceries online.
- **Consumer Behavior and Adoption:** Research often focuses on consumer behavior and the factors influencing the adoption and usage of online grocery shop websites. This includes exploring the motivations, barriers, and preferences of consumers when it comes to online grocery shopping. Factors such as trust, perceived risks, ease of use, website design, and product variety are commonly examined.
- **User Experience and Interface Design:** The user experience and interface design of online grocery shop websites are important aspects discussed in the literature. Studies explore the impact of website design, navigation, search functionality, and product presentation on user satisfaction and engagement. They highlight the need for intuitive interfaces, effective search features, and appealing product displays to enhance the user experience.
- **Product Information and Trust:** The accuracy and completeness of product information on online grocery shop websites are frequently discussed. Researchers emphasize the importance of providing detailed and reliable information, including product descriptions, images, nutritional facts, and ingredients. Trust-building elements, such as customer reviews and ratings, are also examined as factors influencing consumers' trust in the platform and their purchase decisions.

2.2 Problem Identification

- **Limited Product Availability:** Online grocery shop websites may face challenges in maintaining consistent and comprehensive product availability. Out-of-stock items or limited choices can lead to customer frustration and potentially drive them to seek alternative platforms.
- **Inaccurate Product Information:** Providing accurate and detailed product information is crucial for online grocery shop websites. However, inconsistencies in descriptions, missing or incorrect nutritional facts, or pricing errors can lead to confusion and mistrust among customers.
- **Navigation and Search Difficulties:** Poorly designed user interfaces and ineffective search functionality can make it challenging for users to find specific products or navigate through different categories. Confusing menus, slow loading times, or inadequate search filters may discourage users from exploring the website further.
- **Delivery Challenges:** Timely and reliable delivery is a critical aspect of online grocery shopping. Delivery challenges such as delayed shipments, damaged products, or incorrect orders can result in customer dissatisfaction and loss of trust in the platform.
- **Pricing Transparency:** Lack of transparency in pricing, including hidden fees, additional charges, or unclear pricing structures, can lead to customer distrust and frustration during the checkout process. Customers value transparent and competitive pricing when making purchasing decisions.
- **Payment Security Concerns:** Ensuring robust security measures for online transactions is paramount. If customers perceive a lack of trustworthiness or encounter security issues during the payment process, they may hesitate to proceed with the purchase, compromising the credibility of the online grocery shop website.
- **Lack of Personalization:** Customers appreciate personalized experiences that cater to their individual preferences and shopping habits. Online grocery shop websites that fail to offer personalized recommendations or tailored promotions may miss opportunities to enhance customer engagement and loyalty.

Chapter 3: Requirement Analysis

3.1 Software Requirement:

- Frontend: HTML, CSS, PHP, Bootstarp, JavaScript
- Backend: Mysql
- Server: Xamp
- Windows:7,10,11
- Vs code

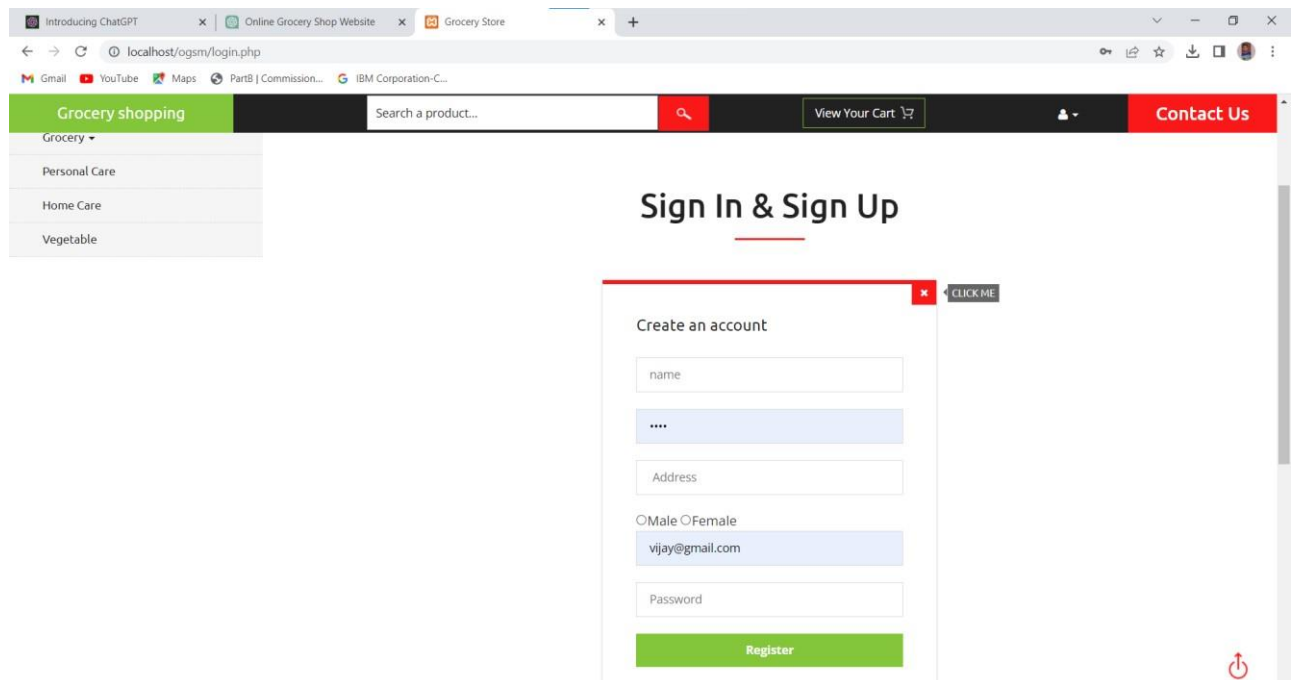

3.2 Hardware Requirement

- Computer or laptop
- Intel(R) Core(TM) i3-Processor
- RAM-2GB Mininum
- Storage-100GB
- Wi-fi Router

Chapter 4: Module Description

4.1 User Registration

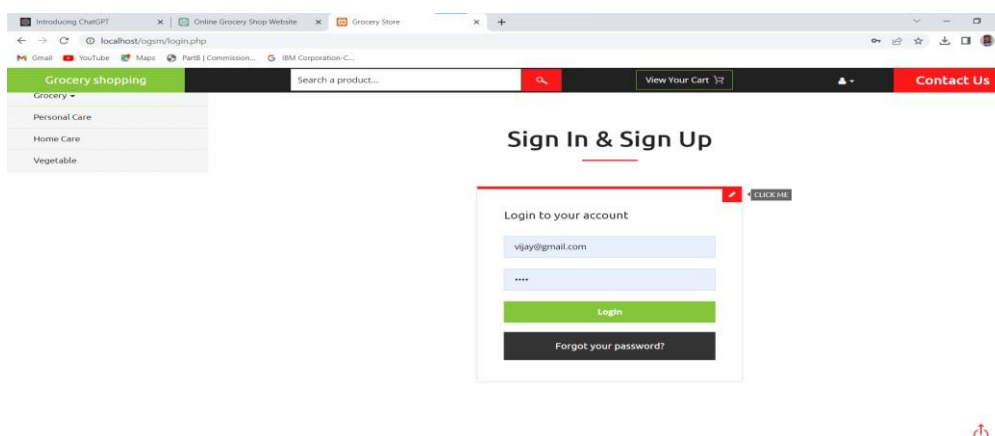

User registration module is used to register the user information and it will be store in database. The information such as username, email, password and confirm password collected. The collected details are sent to the database for the purpose of login.

The screenshot shows a web browser window with the URL `localhost/ogsm/login.php`. The page has a header with a green 'Grocery shopping' button, a search bar, a 'View Your Cart' button, and a 'Contact Us' button. A sidebar on the left lists categories: Grocery, Personal Care, Home Care, and Vegetable. The main content area is titled 'Sign In & Sign Up'. A modal window titled 'Create an account' is open, containing the following fields: 'name', a password field with four dots, 'Address', gender selection ('Male' and 'Female' radio buttons), an email field with 'vijay@gmail.com', and a 'Password' field. A green 'Register' button is at the bottom of the modal. A 'CLICK ME' button is visible in the top right corner of the modal.

4.2 User Login

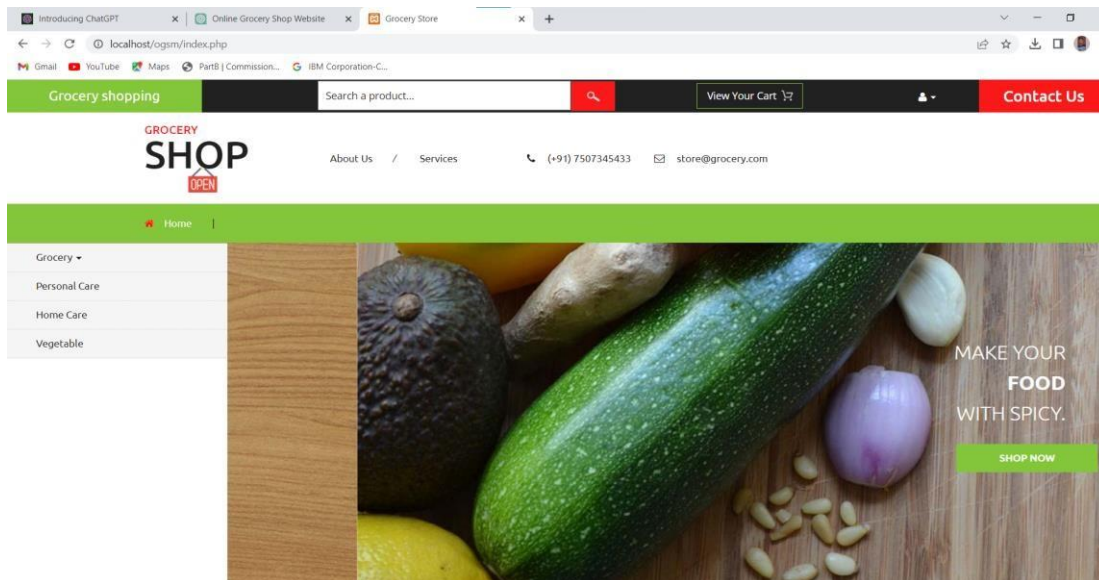

The user login module is used to login of the user and will continuous the other process. If user is already registered he/her can directly login by entering username and password.

The screenshot shows the same web browser window as before, but the modal window is now titled 'Login to your account'. It contains an email field with 'vijay@gmail.com', a password field with four dots, a green 'Login' button, and a 'Forgot your password?' link. The 'CLICK ME' button is still present in the top right corner of the modal.

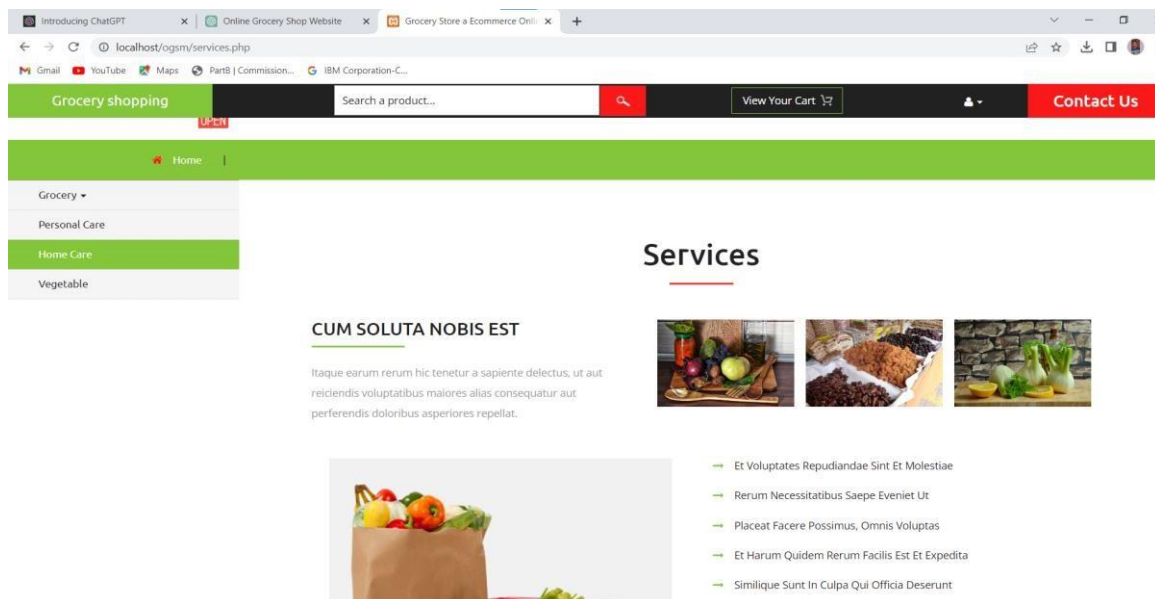

4.3 User-Home

Home page module is a combination of all pages here we can access all pages of user portal. It contains home, about us, services and industry blogs web pages in one page that is home page.

4.4 User-Services

User Services module is used to show the services provided by the Shop to the user's and features of services provided by the shop to the user's

4.5 Latest Listings

User will see the new listed Product Information and explore them. Send Enquiry or View the Product Detail.

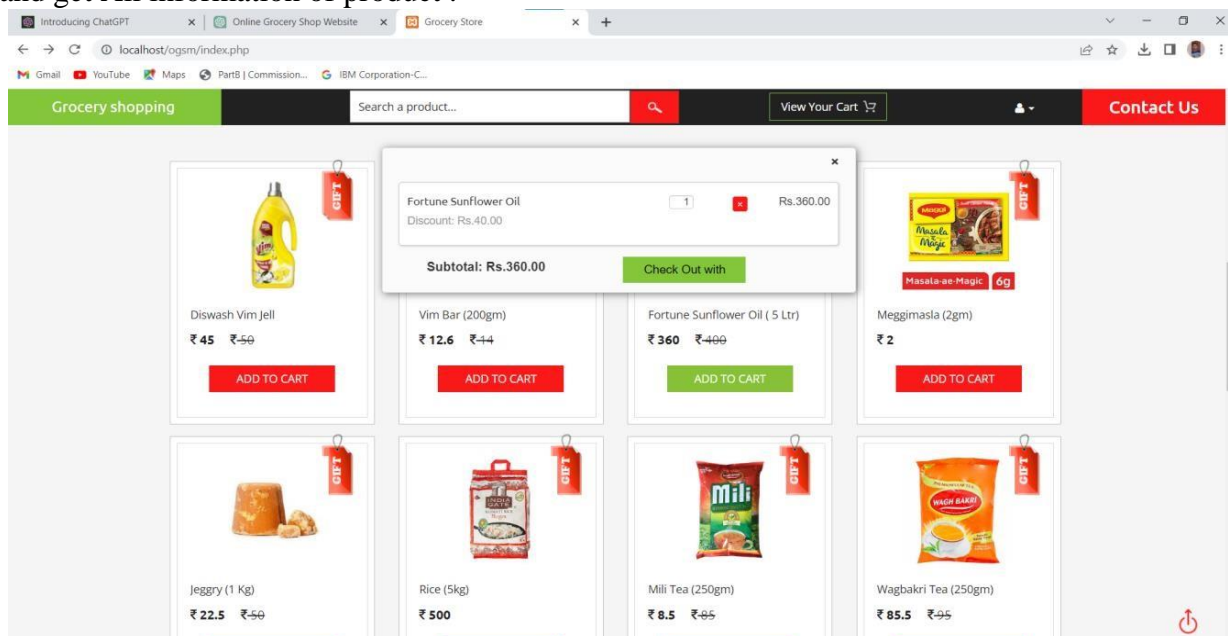

Vegetable products

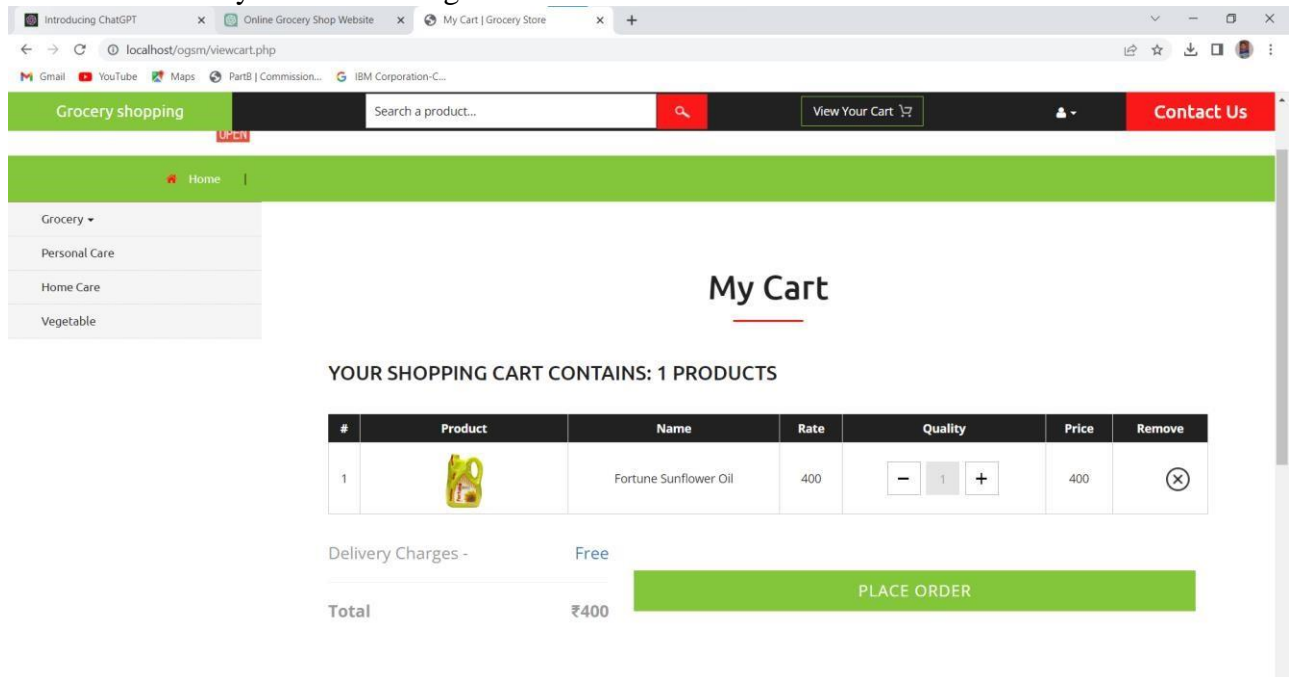

4.6 View Product

User Will See all the detail and information about the product and see the property images and get All information of product .

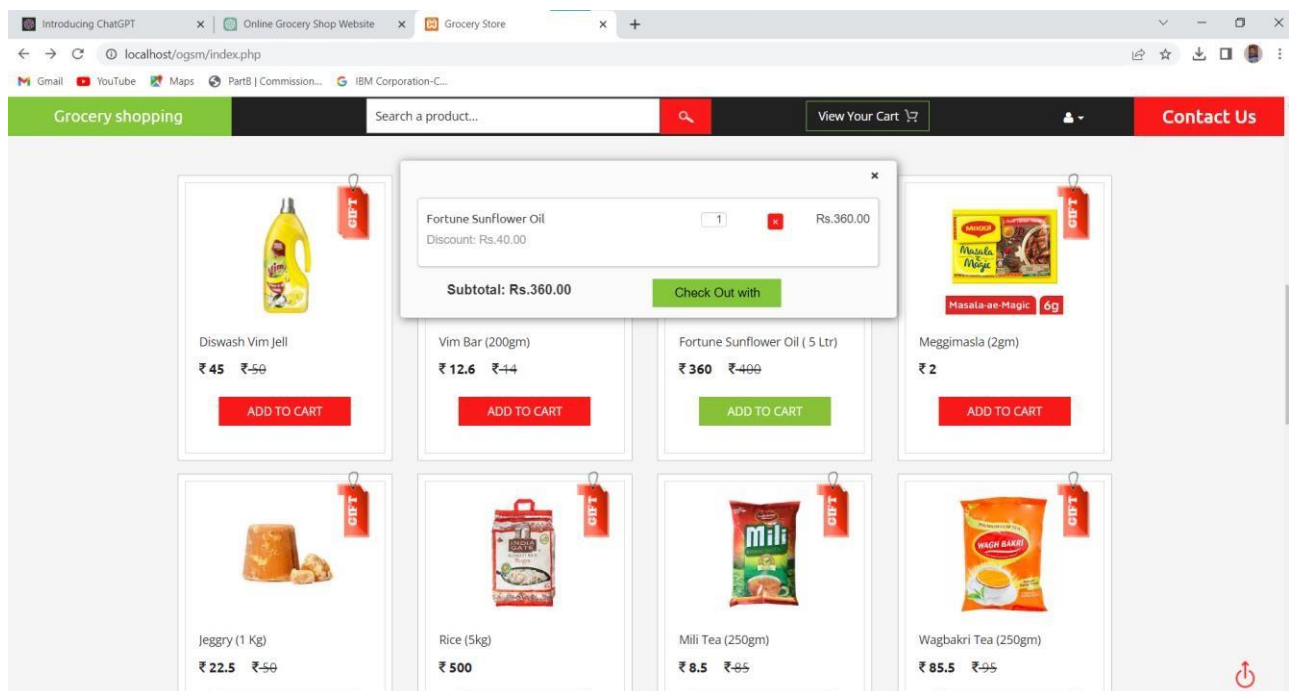

4.7 User Cart

User Cart is for get all information about the enquiry and get the listing product they will edit the information any time user will get all access.

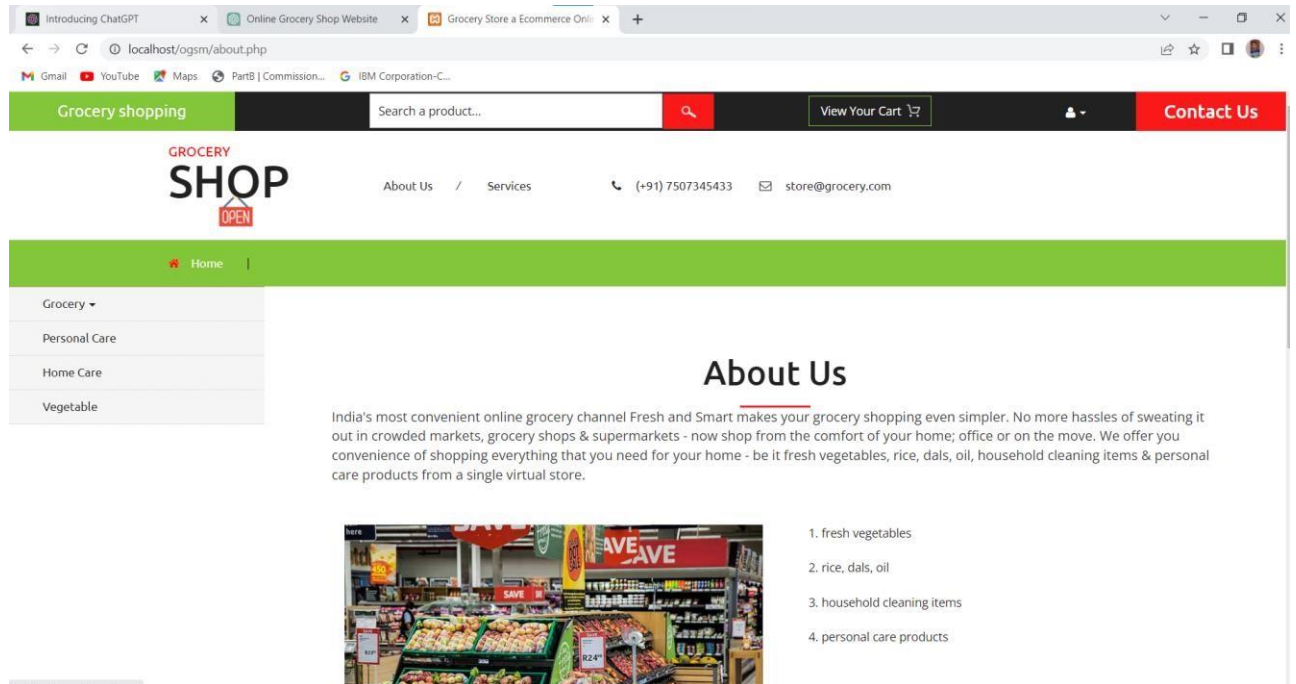

4.8 Search Product

User will search the product with the requiremant and get the best option of product.

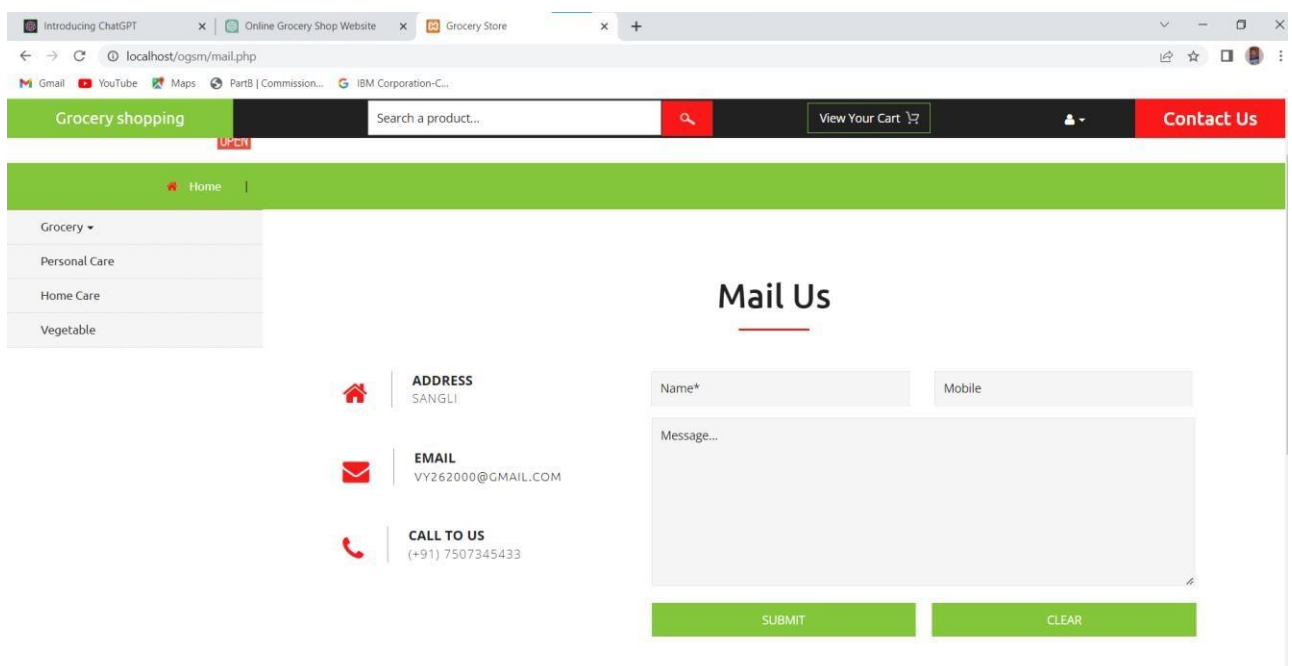

4.9 About us

About-us module shows information about the shop

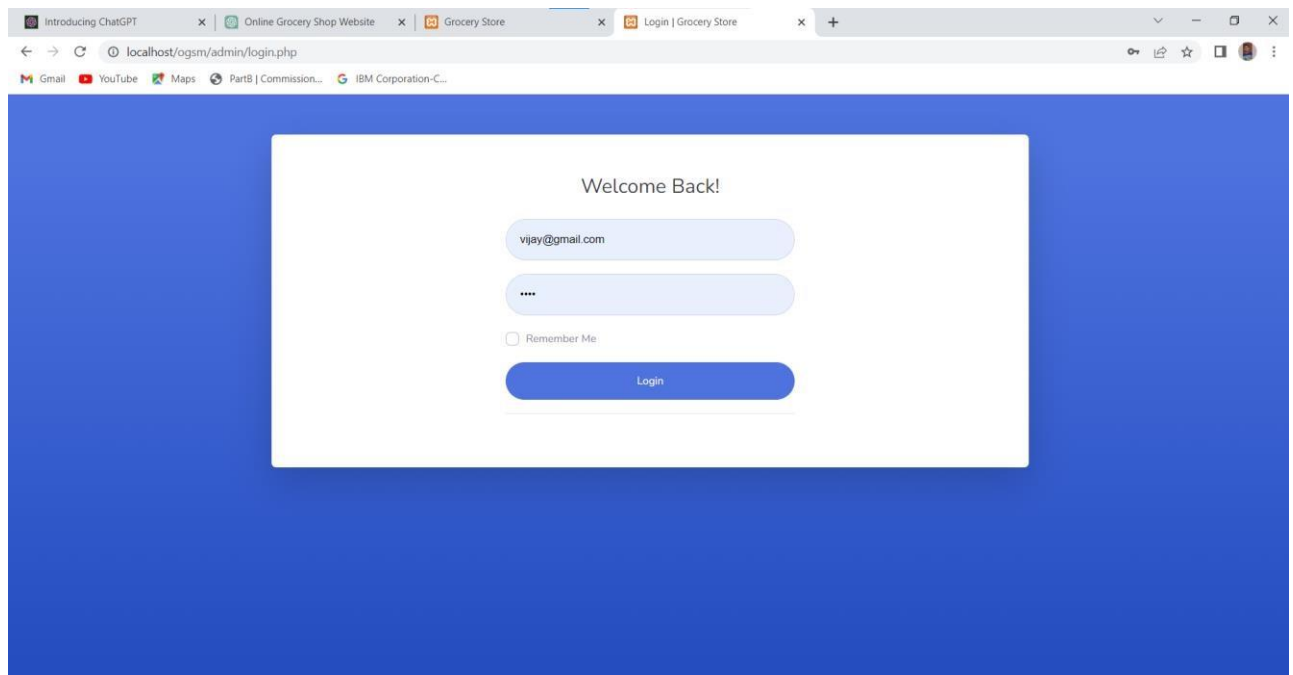

4.10 User-Contactus

user contact module is used to user can contact with shop admin for the service like user want a project hospital management system then user can contact with admin using contact module.

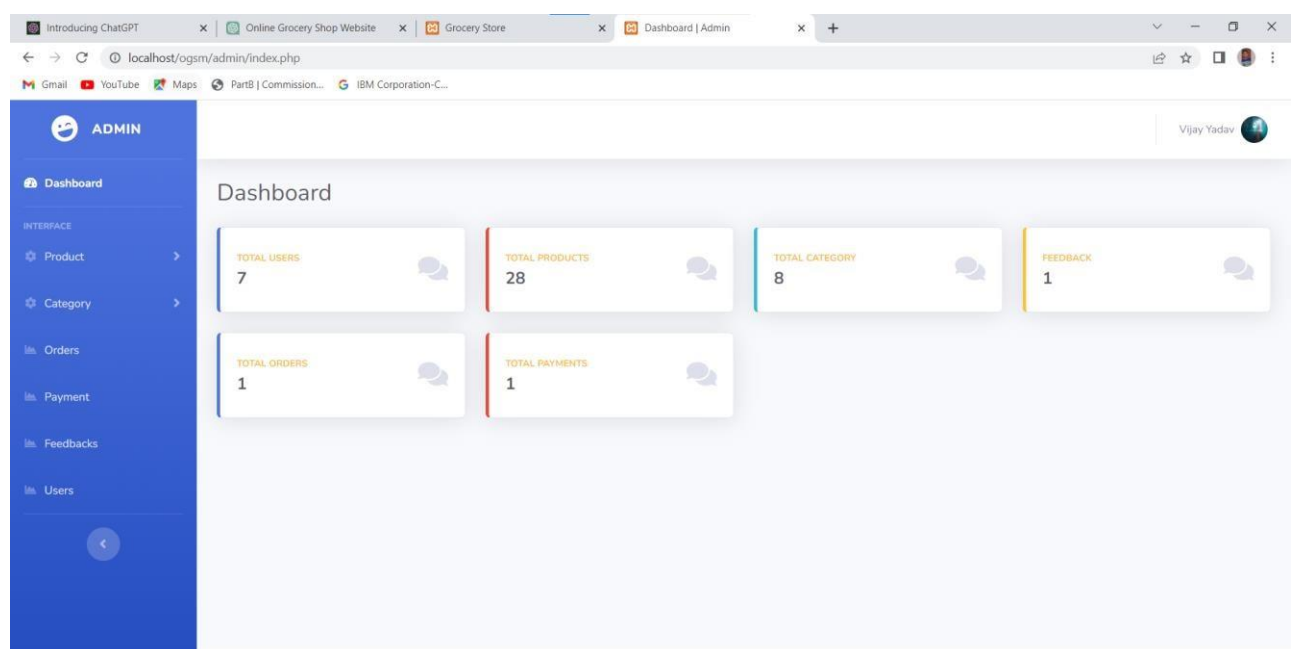

4.11 Admin Login

The Admin login module is used to login of the Admin can manage all the process of user's.

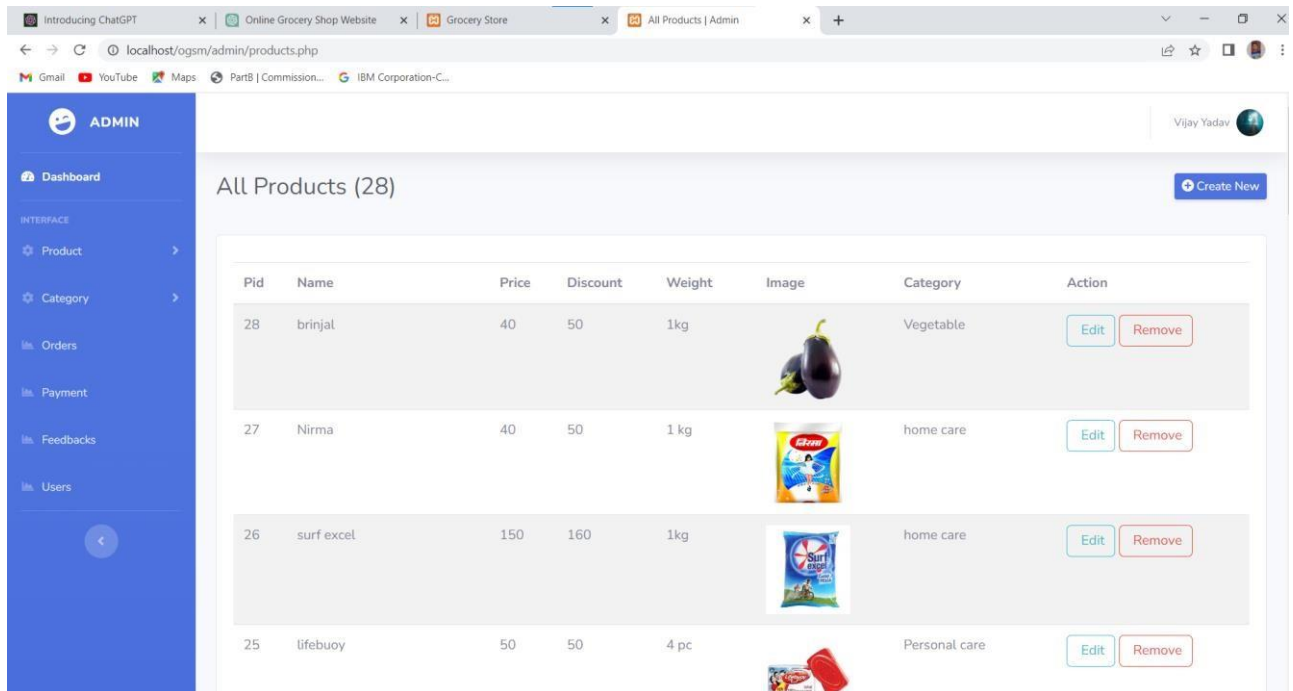

4.12 Admin Dashboard

Admin dashboard is used to shows the all activities records of user . It is useful to manage the record of all these activities.

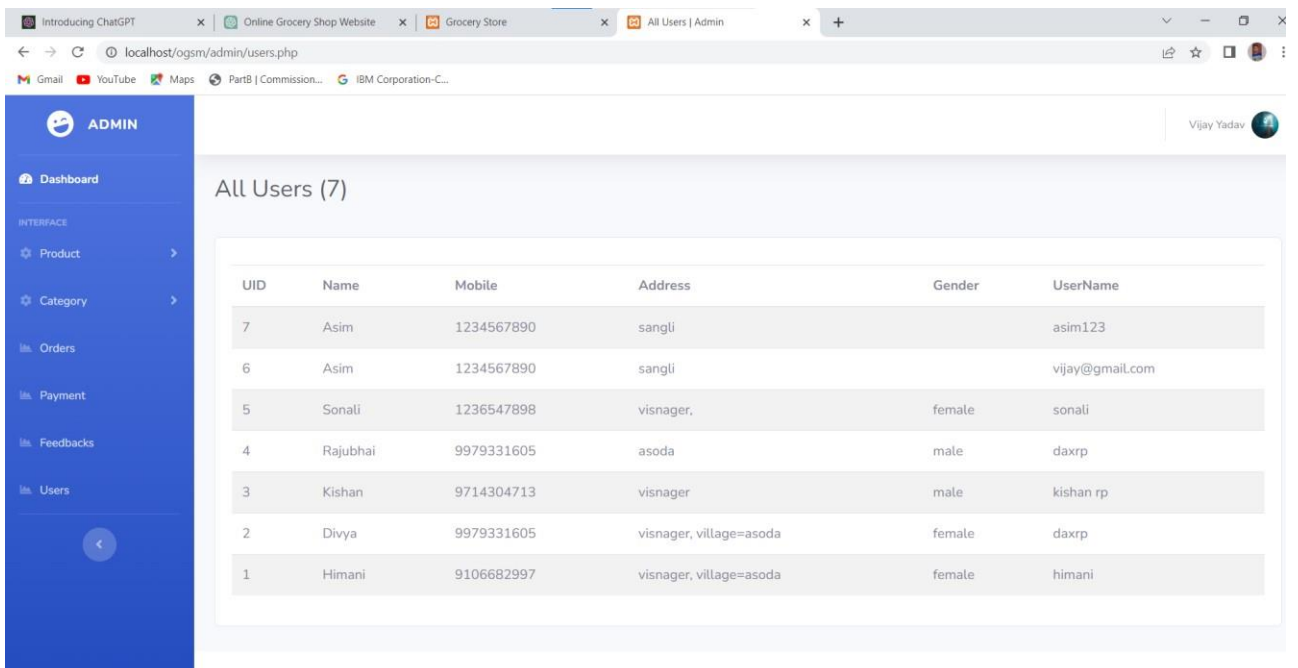

4.13 Product Add or Remove

Admin will see the users property listing details,

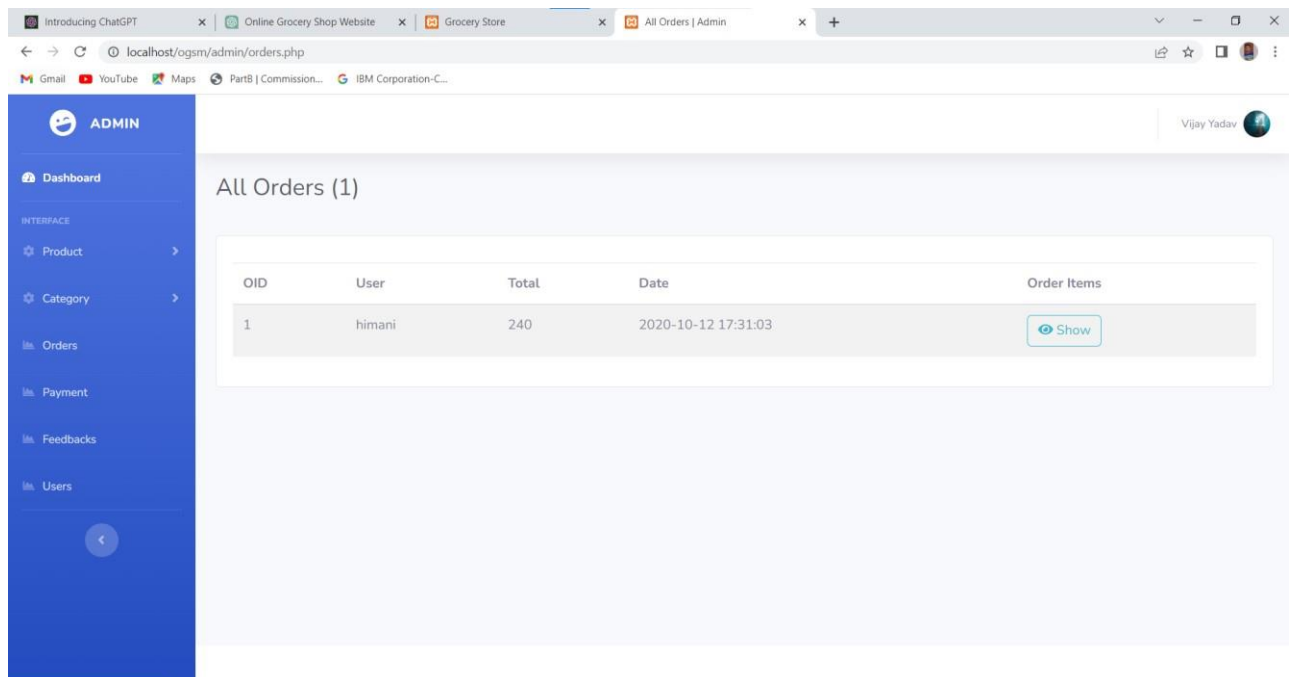

Pid	Name	Price	Discount	Weight	Image	Category	Action
28	brinjal	40	50	1kg		Vegetable	Edit Remove
27	Nirma	40	50	1 kg		home care	Edit Remove
26	surf excel	150	160	1kg		home care	Edit Remove
25	lifebuoy	50	50	4 pc		Personal care	Edit Remove

4.14 User List

UID	Name	Mobile	Address	Gender	UserName
7	Asim	1234567890	sangli		asim123
6	Asim	1234567890	sangli		vijay@gmail.com
5	Sonali	1236547898	visnager,	female	sonali
4	Rajubhai	9979331605	asoda	male	daxrp
3	Kishan	9714304713	visnager	male	kishan rp
2	Divya	9979331605	visnager, village=asoda	female	daxrp
1	Himani	9106682997	visnager, village=asoda	female	himani

Chapter 5: Methodology

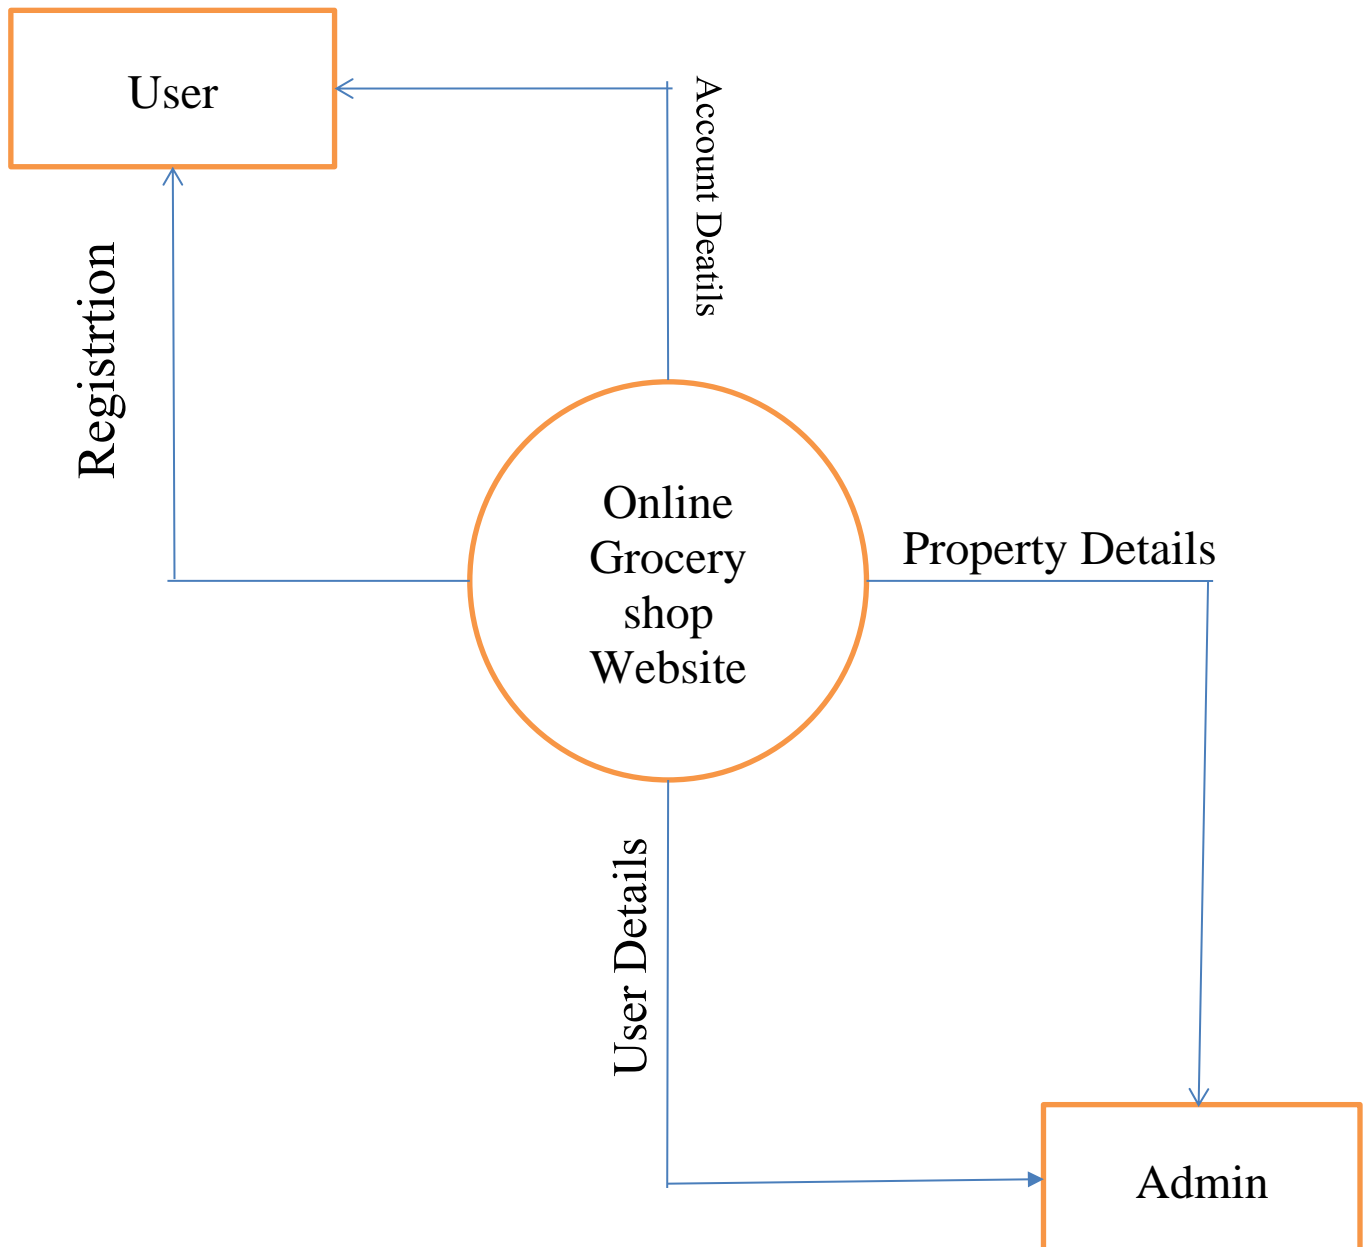

5.1 Architecture Design

5.2 Flow Diagram

5.3 Data Flow Diagram

Chapter 6: Implementation

6.1 PHP

PHP is an open-source, interpreted, and object-oriented scripting language that can be executed at the server-side. PHP is well suited for web development. Therefore, it is used to develop web applications (an application that executes on the server and generates the dynamic page.).

PHP script is executed much faster than those scripts which are written in other languages such as JSP and ASP. PHP uses its own memory, so the server workload and loading time is automatically reduced, which results in faster processing speed and better performance. PHP started out as a small open source project that evolved as more and more people found out how useful it was. Rasmus Lerdorf unleashed the first version of PHP way back in 1994.

PHP is a MUST for students and working professionals to become a great Software Engineer specially when they are working in Web Development Domain. I will list down some of the key advantages of learning PHP:

- PHP is a recursive acronym for "PHP: Hypertext Preprocessor".
- PHP is a server side scripting language that is embedded in HTML. It is used to manage dynamic content, databases, session tracking, even build entire e-commerce sites.
- It is integrated with a number of popular databases, including MySQL, PostgreSQL, Oracle, Sybase, Informix, and Microsoft SQL Server.
- PHP is pleasingly zippy in its execution, especially when compiled as an Apache module on the Unix side. The MySQL server, once started, executes even very complex queries with huge result sets in record-setting time.
- PHP supports a large number of major protocols such as POP3, IMAP, and LDAP. PHP4 added support for Java and distributed object architectures (COM and CORBA), making n-tier development a possibility for the first time.
- PHP is forgiving: PHP language tries to be as forgiving as possible.

6.2 HTML

HTML (HyperText Markup Language) is the code that is used to structure a web page and its content. For example, content could be structured within a set of paragraphs, a list of bulleted points, or using images and data tables.

Originally, HTML was developed with the intent of defining the structure of documents like headings, paragraphs, lists, and so forth to facilitate the sharing of scientific information between researchers. Now, HTML is being widely used to format web pages with the help of different tags available in HTML language.

- Create Web site - You can create a website or customize an existing web template if you know HTML well.
- Become a web designer - If you want to start a career as a professional web designer, HTML and CSS designing is a must skill.
- Understand web - If you want to optimize your website, to boost its speed and performance, it is good to know HTML to yield best results.
- Learn other languages - Once you understand the basic of HTML then other related technologies like javascript, php, or angular are become easier to understand.

6.3 CSS

Cascading Style Sheets, fondly referred to as CSS, is a simple design language intended to simplify the process of making web pages presentable.

CSS is a MUST for students and working professionals to become a great Software Engineer specially when they are working in Web Development Domain.

CSS is a MUST for students and working professionals to become a great Software Engineer specially when they are working in Web Development Domain. I will list down some of the key advantages of learning CSS:

- Create Stunning Web site - CSS handles the look and feel part of a web page. Using CSS, you can control the color of the text, the style of fonts, the spacing between paragraphs, how columns are sized and laid out, what background images or colors are used, layout designs, variations in display for different devices and screen sizes as well as a variety of other effects.
- Become a web designer - If you want to start a career as a professional web designer, HTML and CSS designing is a must skill.

6.4 JS

JavaScript, often abbreviated JS, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS. Over 97% of websites use JavaScript on the user side for web page behavior

Javascript is a MUST for students and working professionals to become a great Software Engineer specially when they are working in Web Development Domain. I will list down some of the key advantages of learning Javascript:

Javascript is the most popular programming language in the world and that makes it a programmer's great choice. Once you learnt Javascript, it helps you developing great front-end as well as back-end softwares using different Javascript based frameworks like jQuery, Node.JS etc.

Javascript is everywhere, it comes installed on every modern web browser and so to learn Javascript you really do not need any special environment setup. For example Chrome, Mozilla Firefox , Safari and every browser you know as of today, supports Javascript. Javascript helps you create beautiful and crazy fast websites. You can develop your website with a console like look and feel and give your users the best Graphical User Experience. JavaScript usage has now extended to mobile app development, desktop app development, and game development. This opens many opportunities for you as Javascript Programmer. Due to high demand, there is tons of job growth and high pay for those who know JavaScript. You can navigate over to different job sites to see what having JavaScript skills looks like in the job market

6.5 Xamp Server

XAMPP is a free and open-source cross-platform web server solution stack package developed by Apache Friends, consisting mainly of the Apache HTTP Server, MariaDB database, and interpreters for scripts written in the PHP and Perl programming languages.

XAMPP is one of the widely used cross-platform web servers, which helps developers to create and test their programs on a local webserver. It was developed by the Apache Friends, and its native source code can be revised or modified by the audience. It consists of Apache HTTP Server, MariaDB, and interpreter for the different programming languages like PHP and Perl. It is available in 11 languages and supported by different platforms such as the IA-32 package of Windows & x64 package of macOS and Linux.

As defined earlier, XAMPP is used to symbolize the classification of solutions for different technologies. It provides a base for testing of projects based on different technologies through a personal server. XAMPP is an abbreviated form of each alphabet representing each of its major components. This collection of software contains a web server named Apache, a database management system named MariaDB and scripting programming languages such as PHP and Perl. X denotes Cross-platform, which means that it can work on different platforms such as Windows, Linux, and macOS.

6.6 MySql Database

MySQL is an open-source relational database management system. Its name is a combination of “My”, the name of co-founder Michael Widenius’s daughter, and “SQL”, the abbreviation for Structured Query Language

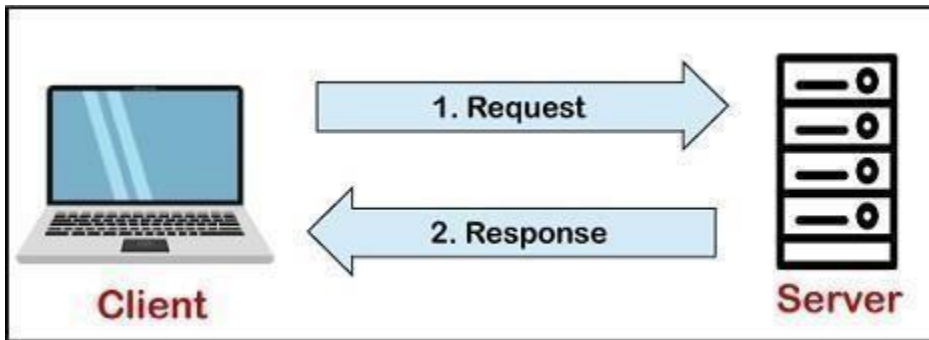

MySQL is a Relational Database Management System (RDBMS) software that provides many things, which are as follows:

- It allows us to implement database operations on tables, rows, columns, and indexes.
 - It defines the database relationship in the form of tables (collection of rows and columns), also known as relations.
 - It provides the Referential Integrity between rows or columns of various tables. ○

It allows us to updates the table indexes automatically.

- It uses many SQL queries and combines useful information from multiple tables for the end-users.

MySQL follows the working of user-Server Architecture. This model is designed for the end-users called users to access the resources from a central computer known as a server using network services. Here, the users make requests through a graphical user interface (GUI), and the server will give the desired output as soon as the instructions are matched. The process of MySQL environment is the same as the user-server model.

The core of the MySQL database is the MySQL Server. This server is available as a separate program and responsible for handling all the database instructions, statements, or commands. The working of MySQL database with MySQL Server are as follows:

1. MySQL creates a database that allows you to build many tables to store and manipulate data and defining the relationship between each table.
2. users make requests through the GUI screen or command prompt by using specific SQL expressions on MySQL.
3. Finally, the server application will respond with the requested expressions and produce the desired result on the user-side.

A user can use any MySQL GUI. But, it is making sure that your GUI should be lighter and user-friendly to make your data management activities faster and easier. Some of the most widely used MySQL GUIs are MySQL Workbench, SequelPro, DBVisualizer, and the Navicat DB Admin Tool. Some GUIs are commercial, while some are free with limited functionality, and some are only compatible with MacOS. Thus, you can choose the GUI according to your needs.

6.7 Visual Studio code

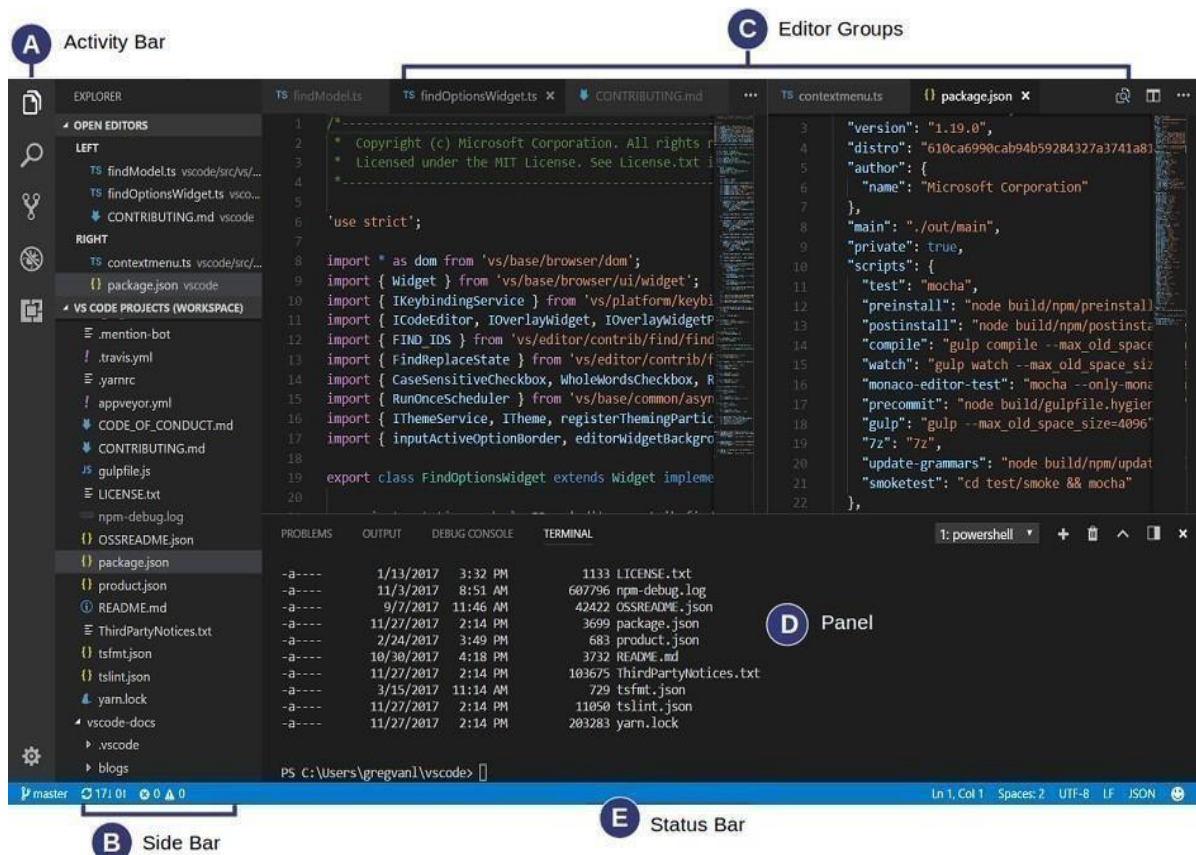

Visual Studio Code, also commonly referred to as VS Code, is a source-code editor made by Microsoft for Windows, Linux and macOS. Features include support for debugging, syntax highlighting, intelligent code completion, snippets, code refactoring, and embedded Git

VS Code supports a wide array of programming languages from Java, C++, and Python to CSS, Go, and Dockerfile. Moreover, VS Code allows you to add on and even creating new extensions including code linters, debuggers, and cloud and web development support.

The VS Code user interface allows for a lot of interaction compared to other text editors. To simplify user experience, VS Code is divided into five main regions:

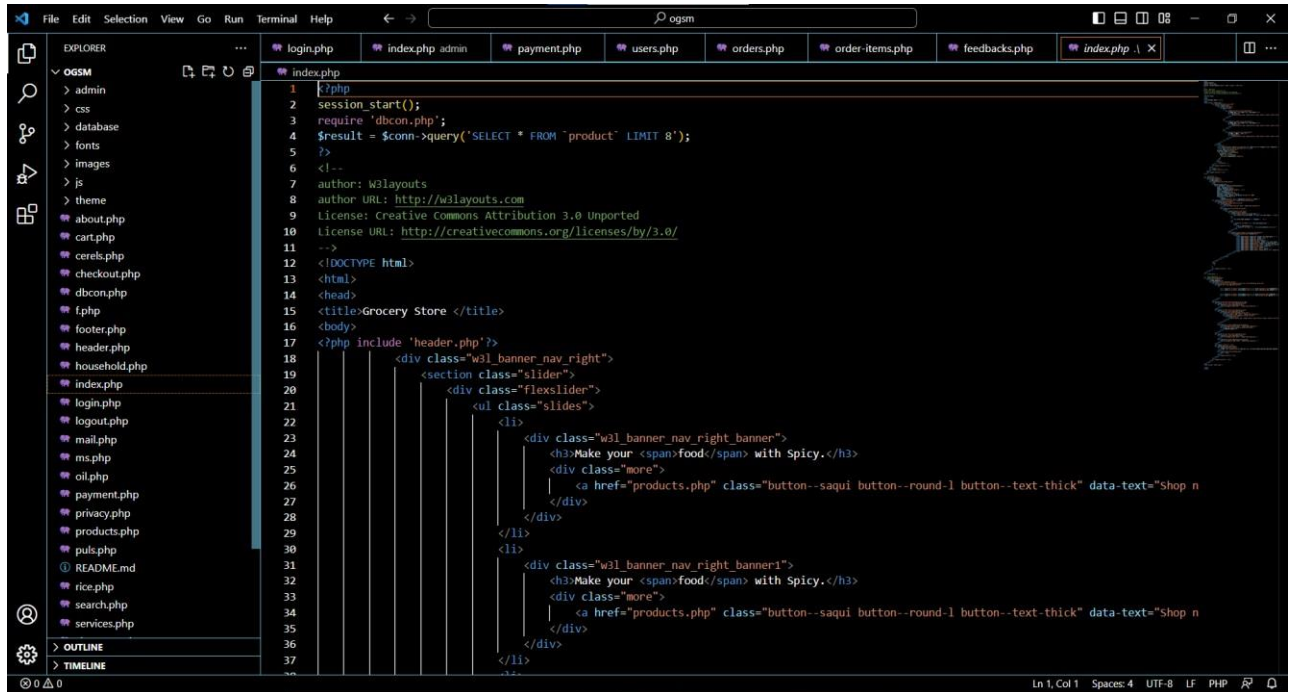

- The activity bar
- The side bar
- Editor groups
- The panel
- The status bar

Chapter 7: Source Code

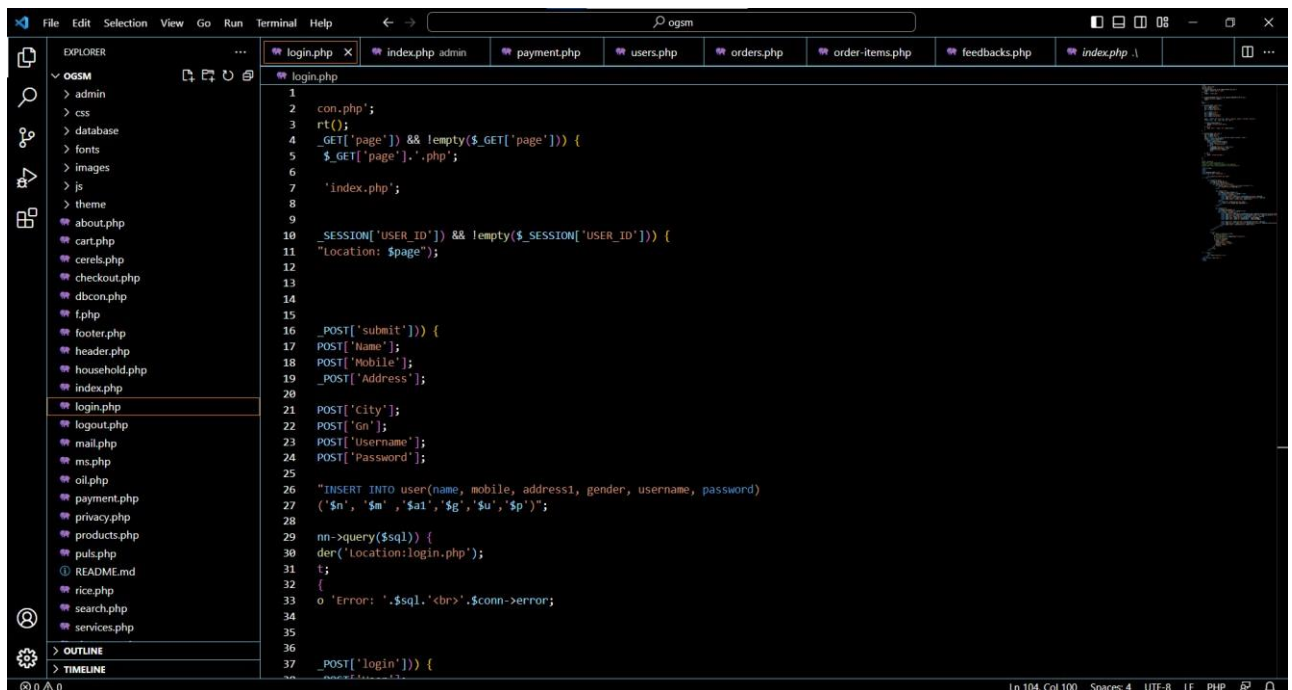

7.1 Source code

• index.php

```
1 <?php
2 session_start();
3 require 'dbcon.php';
4 $result = $conn->query("SELECT * FROM `product` LIMIT 8");
5 ?>

Chapter 8: Testing

8.1 Testing

Software testing is the process of evaluating and verifying that a software product or application does what it is supposed to do. The benefits of testing include preventing bugs, reducing development costs and improving performance.

Software testing follows a common process. Tasks or steps include defining the test environment, developing test cases, writing scripts, analyzing test results and submitting defect reports.

Testing can be time-consuming. Manual testing or ad-hoc testing may be enough for small builds. However, for larger systems, tools are frequently used to automate tasks. Automated testing helps teams implement different scenarios, test differentiators (such as moving components into a cloud environment), and quickly get feedback on what works and what doesn't.

A good testing approach encompasses the application programming interface (API), user interface and system levels. As well, the more tests that are automated, and run early, the better. Some teams build in-house test automation tools. However, vendor solutions offer features that can streamline key test management tasks such as

- **Website Navigation:**
Test the main navigation menu to ensure all links are working correctly.
Verify that the search functionality is functioning properly and returns relevant results.
Check the website's responsiveness on different devices and browsers.
- **User Registration and Login:**
Test the user registration process to ensure new users can sign up successfully.
Verify that users can log in with their credentials without any issues.
Test the "Forgot Password" feature to ensure users can reset their passwords if needed.
- **Product Catalog:**
Test the product listing to ensure all products are displayed correctly.
Verify that product details such as name, price, description, and images are accurate.

Test any filtering or sorting options available for users to find products easily.

- **Shopping Cart and Checkout:**

Add products to the shopping cart and verify that they are displayed correctly.

Test the ability to update quantities, remove items, and apply discounts if applicable.

Perform a test purchase to ensure the checkout process is smooth and the payment gateway functions correctly.

- **Account Management:**

Test the user profile management functionality, including updating personal information addresses, and payment methods.

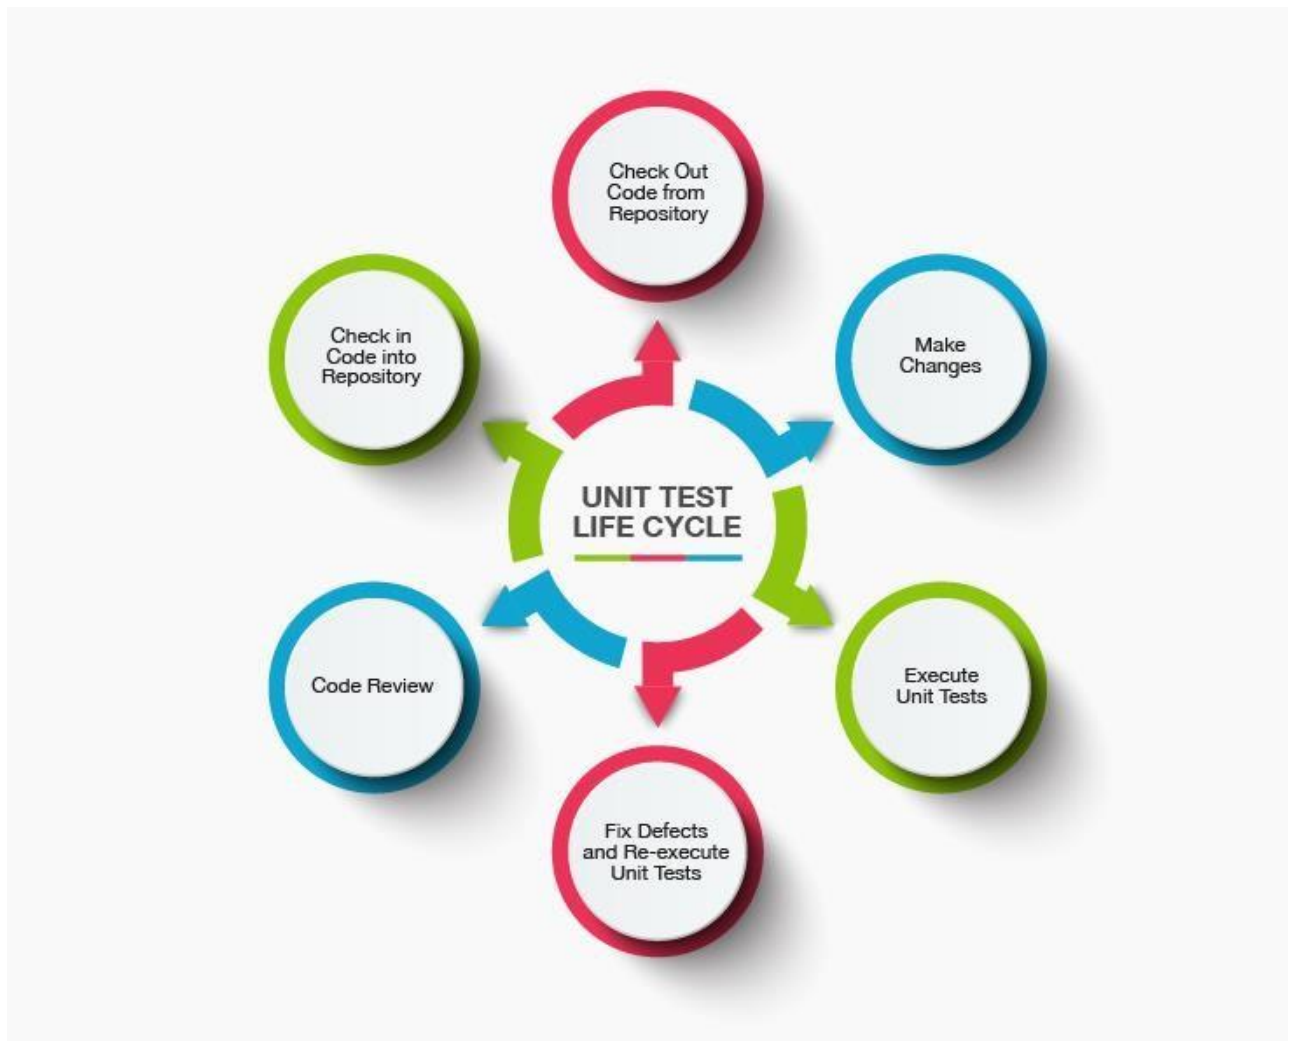

Verify that users can view their order history and track the status of their deliveries.

Test any additional features like wishlists or favorites lists.

- These are just some areas to consider when testing an online grocery shop website. It's essential to create test cases and scenarios based on your specific requirements and business logic. Additionally, consider involving real users or conducting user acceptance testing to gather feedback and improve the website's usability.

8.2 Unit Testing

Unit testing is a software development process in which the smallest testable parts of an application, called units, are individually and independently scrutinized for proper operation.

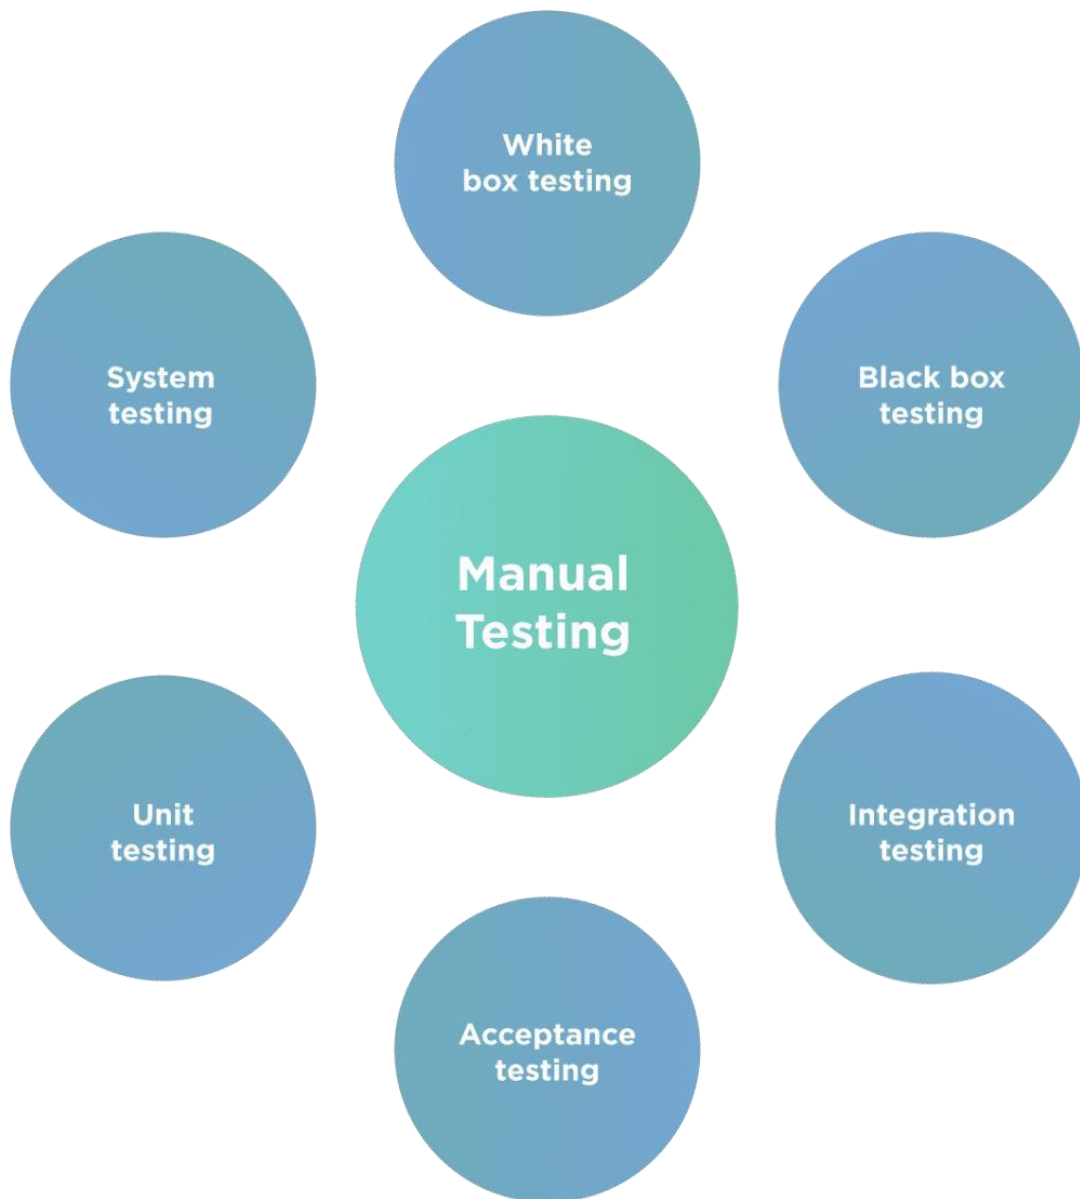

8.3 Integration Testing

Integration testing involves integrating the various modules of an application and then testing their behaviour as a combined, or integrated, unit. Verifying if the individual units are communicating with each other properly and working as intended post-integration is essential.

8.4 Manual Testing

Manual testing is a software testing process in which test cases are executed manually without using any automated tool. All test cases executed by the tester manually according to the end user's perspective. It ensures whether the application is working, as mentioned in the requirement document or not.

Chapter 9: Results

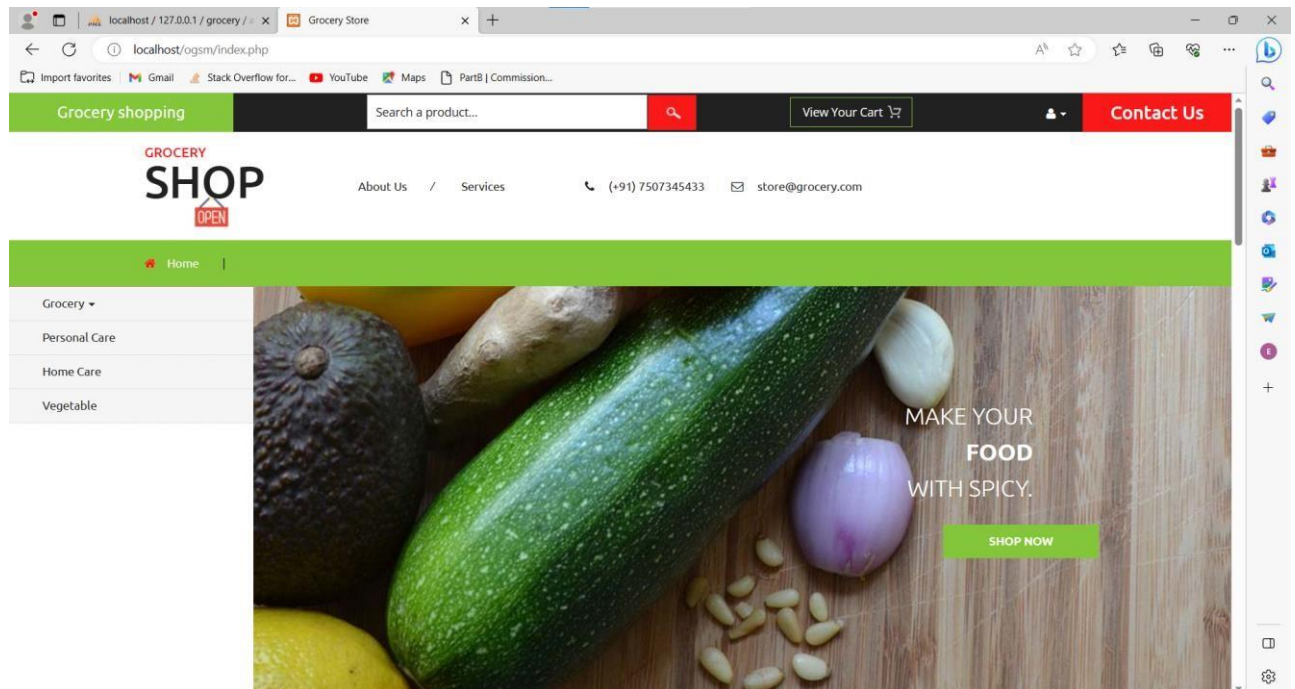

9.1 user Registration

The screenshot shows a web browser window with the address bar displaying 'localhost / 127.0.0.1 / grocery / ...'. The page title is 'Grocery Store'. The navigation bar includes 'Grocery shopping', a search bar, 'View Your Cart', and 'Contact Us'. A sidebar on the left lists 'Personal Care', 'Home Care', and 'Vegetable'. The main content area is titled 'Sign In & Sign Up'. A modal form titled 'Create an account' is displayed, featuring input fields for 'name', a masked password field, 'Address', gender selection ('Male' and 'Female'), an email field with 'vijay@gmail.com', and a 'Password' field. A green 'Register' button is at the bottom of the form. A 'CLICK ME' button is visible in the top right corner of the modal.

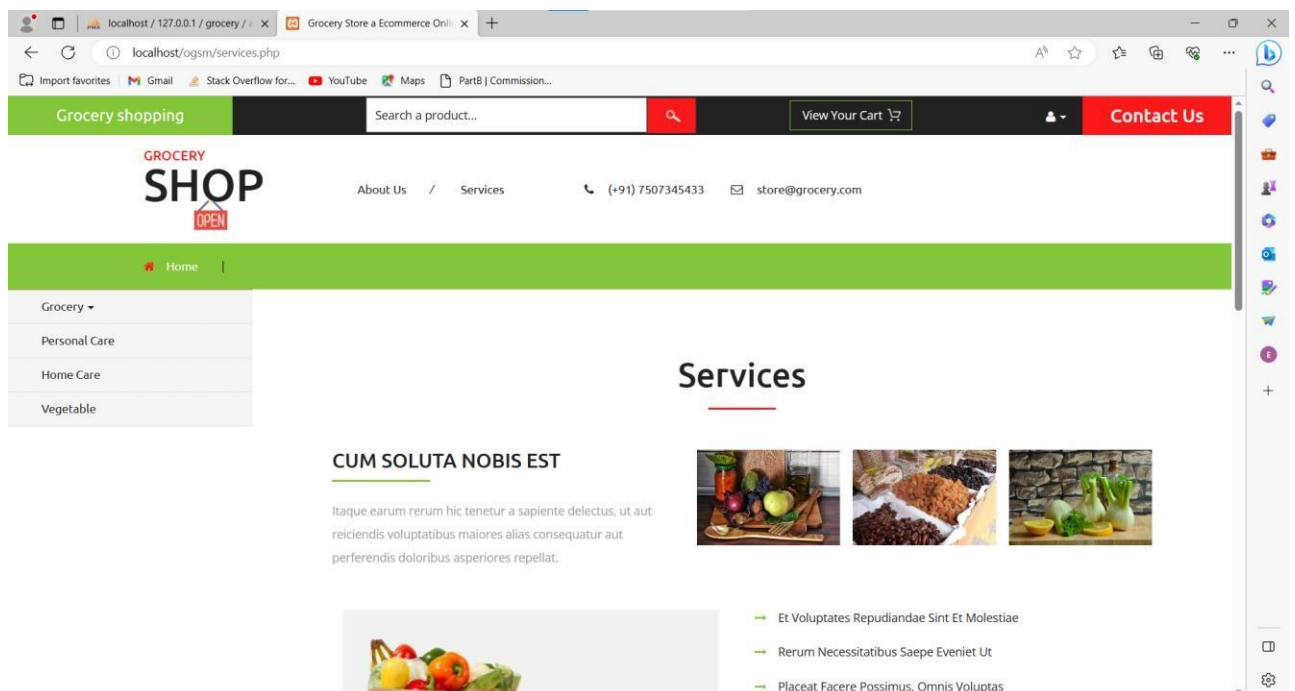

9.2 User Login

The screenshot shows the same web browser window as the registration form. The main content area is titled 'Sign In & Sign Up'. A modal form titled 'Login to your account' is displayed, featuring input fields for the email 'vijay@gmail.com' and a masked password field. A green 'Login' button is at the bottom of the form, and a 'Forgot your password?' link is below it. A 'CLICK ME' button is visible in the top right corner of the modal.

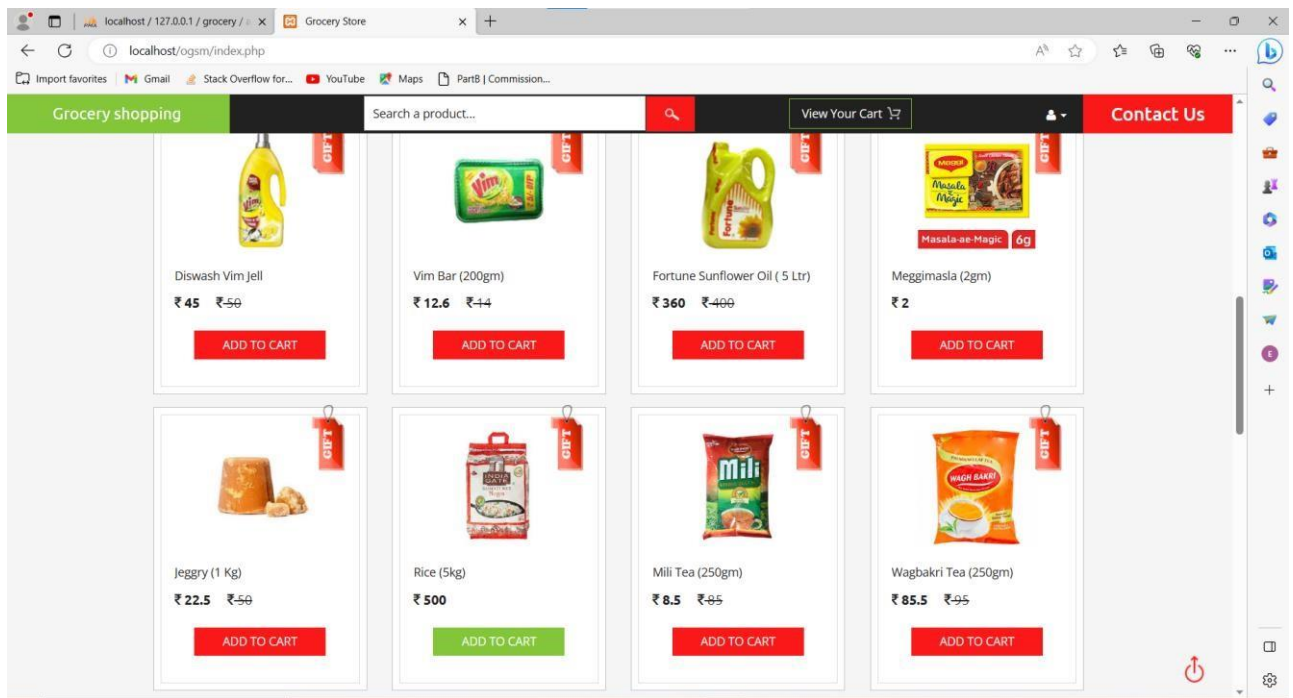

9.3 User-Home

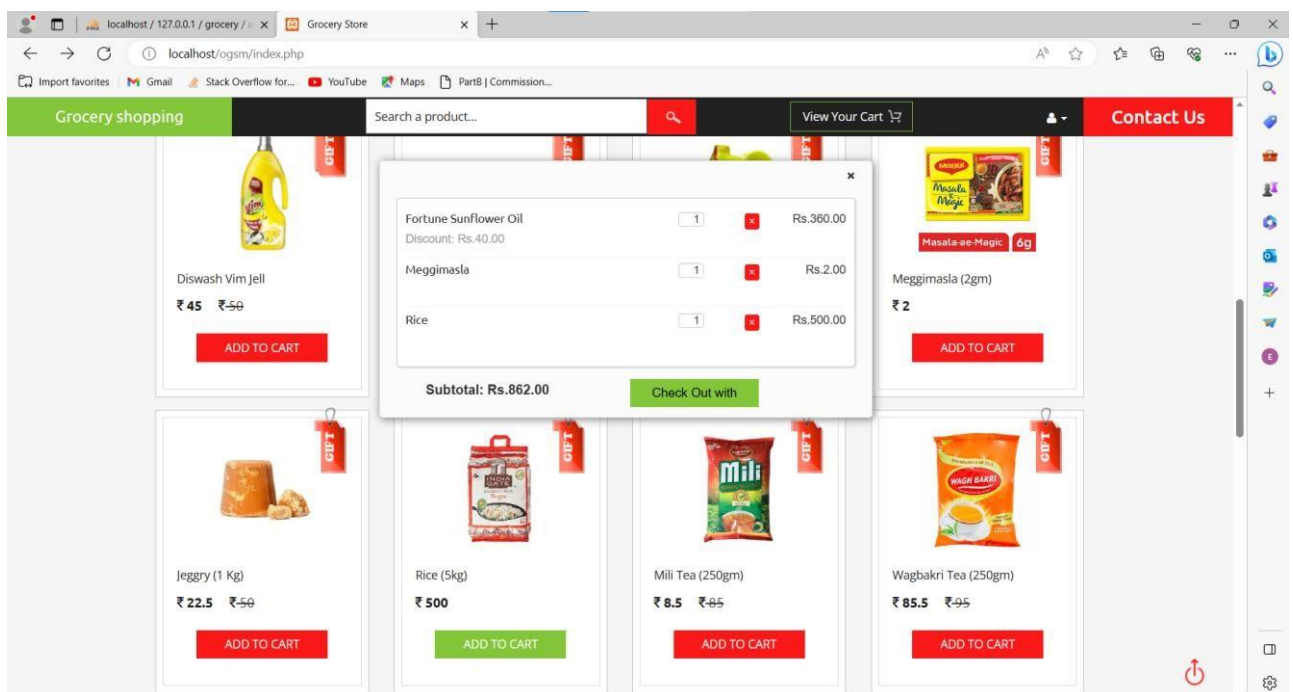

9.4 Our Services

9.5 Product Listings

9.6 View cart

9.7 Product Billing

The screenshot shows a web browser window with the URL `localhost/ogsm/viewcart.php`. The page displays a shopping cart with the following items:

#	Product	Name	Rate	Quantity	Price	Remove
1		Fortune Sunflower Oil	400	1	400	
2		Meggimasa	2	1	2	
3		Rice	500	1	500	

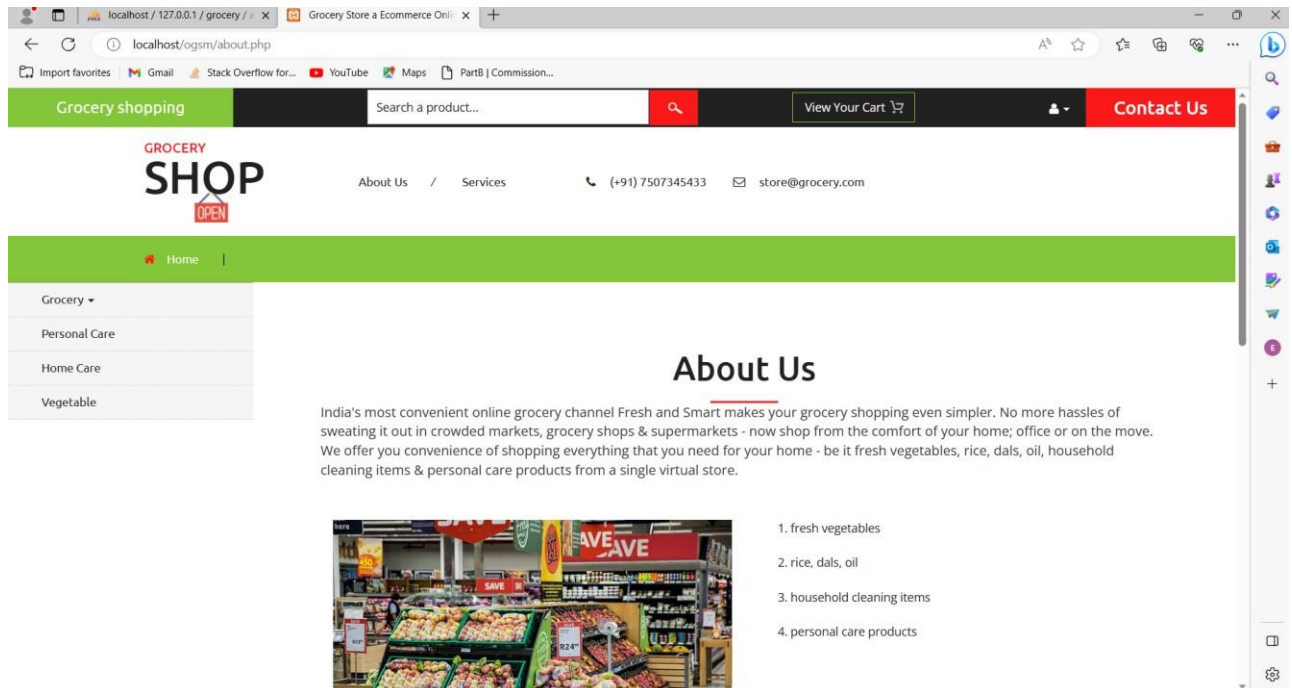

Below the table, the delivery charges are listed as "Free". The total price is ₹902. A green button labeled "PLACE ORDER" is visible.

9.8 Search Product.

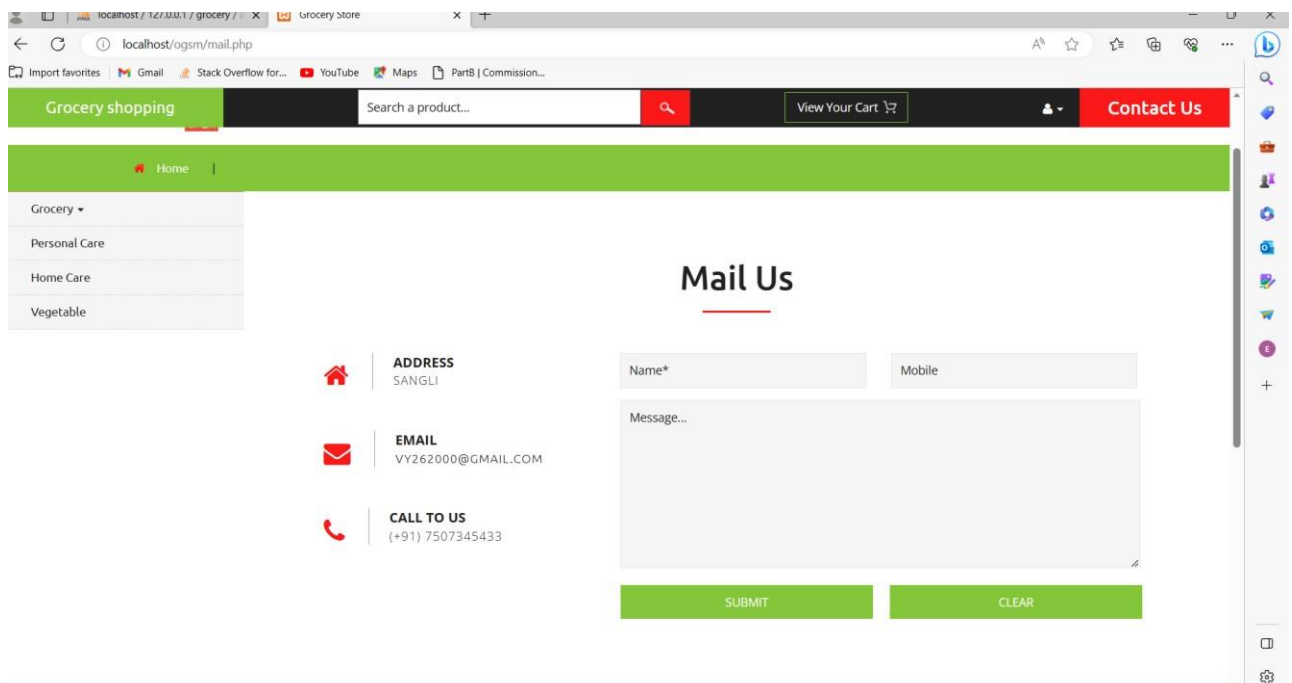

The screenshot shows a web browser window with the URL `localhost/ogsm/search.php`. The page displays a search result for "Vim Bar200gm". The product image is shown, along with the price ₹14 and a crossed-out price ₹10. A red button labeled "ADD TO CART" is visible.

Below the search result, there is a navigation bar with the following links: INFORMATION, WHAT IN STORES, and CONTACT US.

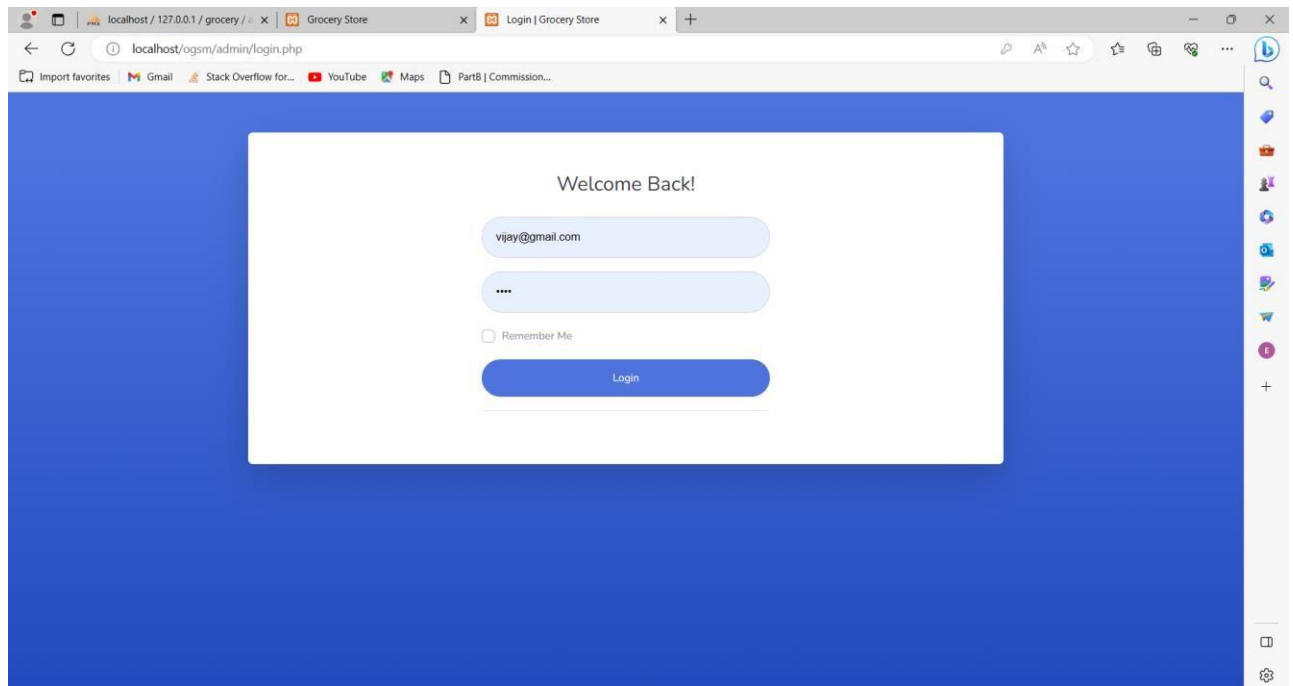

9.9 User-About us

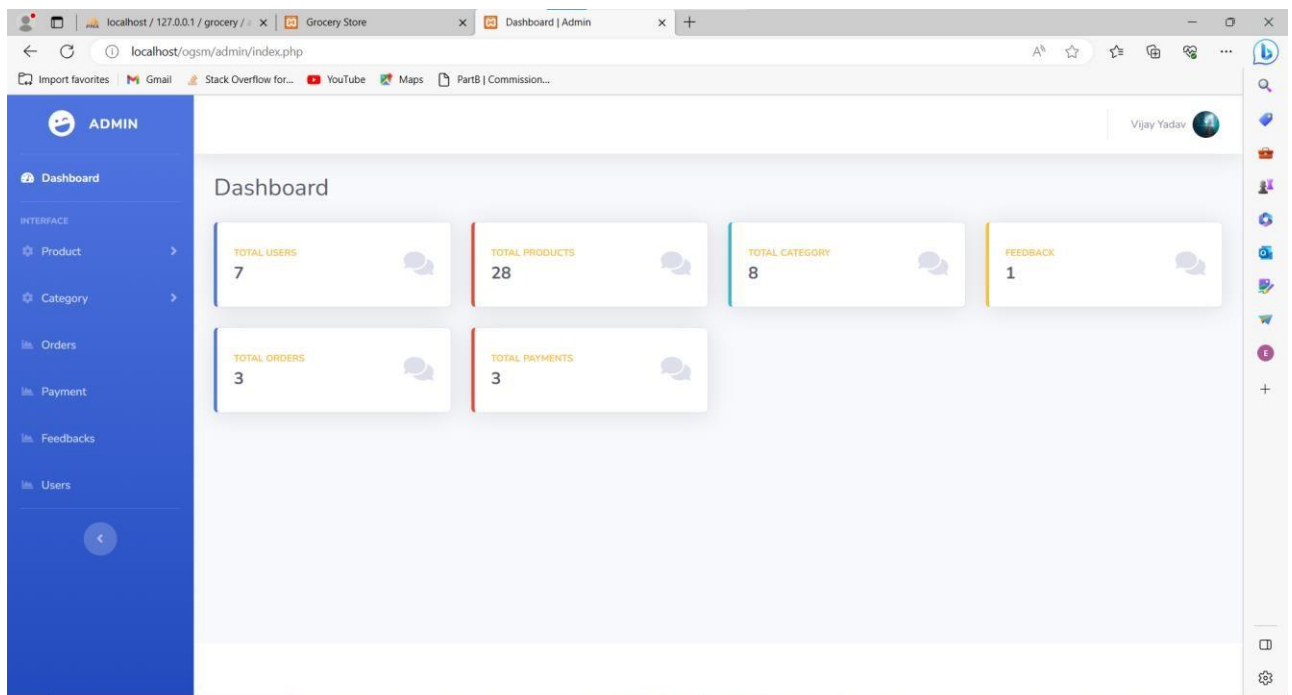

9.10 User-Contact

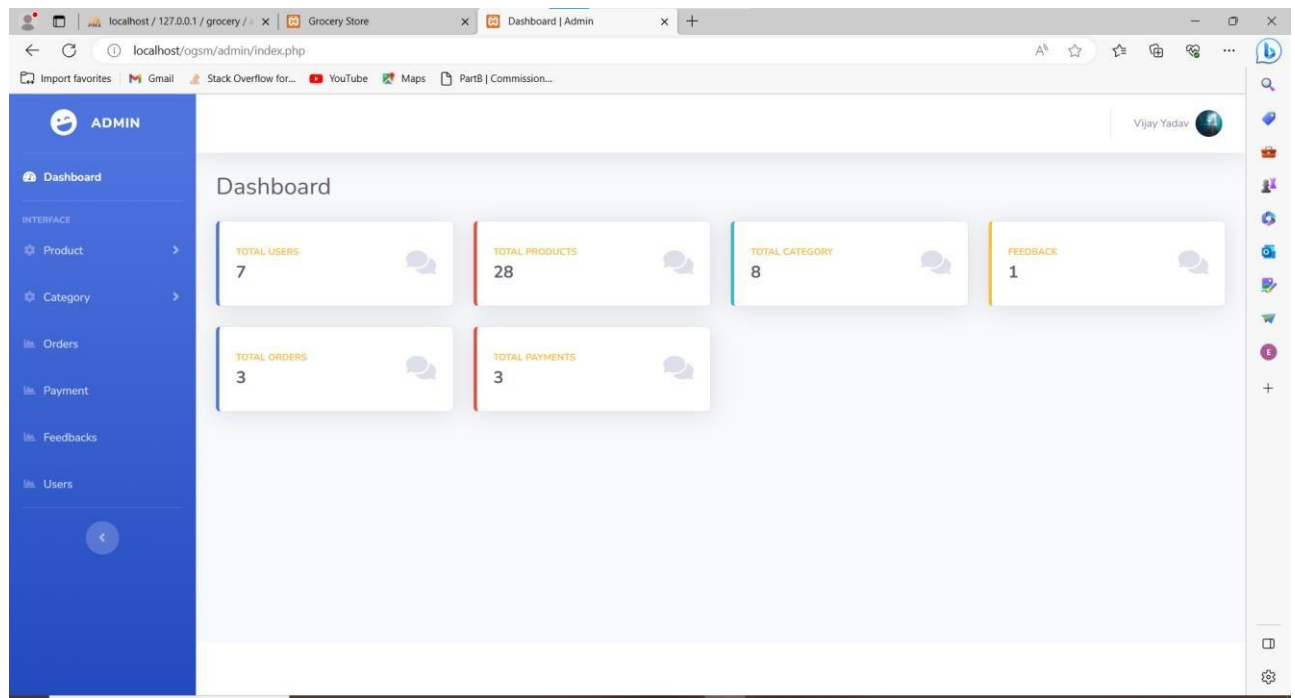

9.11 Admin Login

9.12 Admin Dashboard

9.13 Product Listing-

9.14 User List

The screenshot shows the Admin Dashboard with the 'All Users' section selected. The sidebar menu is the same as in the previous screenshot. The main content area displays a table titled 'All Users (7)' with 7 rows of user data. The table has columns for UID, Name, Mobile, Address, Gender, and UserName.

UID	Name	Mobile	Address	Gender	UserName
7	Asim	1234567890	sangli		asim123
6	Asim	1234567890	sangli		vijay@gmail.com
5	Sonali	1236547898	visnager,	female	sonali
4	Rajubhai	9979331605	asoda	male	daxrp
3	Kishan	9714304713	visnager	male	kishan rp
2	Divya	9979331605	visnager, village=asoda	female	daxrp
1	Himani	9106682997	visnager, village=asoda	female	himani

9.15 All Category

The screenshot displays the 'All Category (8)' page in a web browser. The browser's address bar shows the URL 'localhost/ogsm/admin/category.php'. The page features a blue sidebar on the left with navigation links: Dashboard, Product, Category, Orders, Payment, Feedbacks, and Users. The main content area is titled 'All Category (8)' and includes a 'Create New' button. Below the title is a table with 8 categories, each with an 'Edit' and 'Remove' button. The table columns are CID, Name, Parent Category, and Action. The categories listed are: 8 Cereal (grocery), 7 pluses (grocery), 6 oil rice (grocery), 5 masala and spice (grocery), 4 Vegetable, and 3 home care. The 'Vegetable' and 'home care' categories have a warning message: 'Warning: Trying to access array offset on value of type null in C:\xampp\htdocs\ogsm\admin\category.php on line 99'. The right sidebar shows the user 'Vijay Yadav' and a 'Create New' button.

CID	Name	Parent Category	Action
8	Cereal	grocery	Edit Remove
7	pluses	grocery	Edit Remove
6	oil rice	grocery	Edit Remove
5	masala and spice	grocery	Edit Remove
4	Vegetable	Warning: Trying to access array offset on value of type null in C:\xampp\htdocs\ogsm\admin\category.php on line 99	Edit Remove
3	home care	Warning: Trying to access array offset on value of type null in C:\xampp\htdocs\ogsm\admin\category.php on line 99	Edit Remove

Chapter 10: Advantages

10.1 Advantages

1. **Convenience:** One of the significant benefits of an online grocery shop is the convenience it provides. Customers can shop for groceries from the comfort of their homes or anywhere with an internet connection. They can browse through products, add items to their cart, and complete the purchase without the need to travel to a physical store.
2. **Time-saving:** Online grocery shopping saves time for customers. Instead of spending time commuting to a store, searching for products, waiting in checkout lines, and carrying heavy bags, customers can quickly find the items they need online and have them delivered to their doorstep. This is particularly beneficial for busy individuals or those with limited mobility.
3. **Wide product selection:** Online grocery shops often offer a broader range of products compared to physical stores. They can stock a larger inventory as they are not limited by physical shelf space. Customers can access a wide variety of products, including specialty or niche items that may not be available in local stores.
4. **24/7 availability:** Unlike physical stores with fixed operating hours, online grocery shops are accessible 24 hours a day, 7 days a week. Customers have the flexibility to shop whenever it is convenient for them, even during off-peak hours. This is especially advantageous for people with busy schedules or those who prefer to shop at unconventional times.
5. **Easy price comparison:** Online grocery shopping makes it easier for customers to compare prices and find the best deals. With just a few clicks, they can compare prices across different websites and choose the most affordable options. This empowers customers to make informed purchasing decisions and potentially save money.
6. **Personalized shopping experience:** Online grocery shops can utilize customer data and preferences to offer personalized shopping experiences. They can provide recommendations based on past purchases, offer tailored promotions and discounts, and create customized shopping lists. This personalized approach enhances customer satisfaction and loyalty.
7. **Home delivery and pickup options:** Most online grocery shops provide convenient delivery options, allowing customers to have their groceries delivered directly to their doorstep. This eliminates the need for customers to carry heavy bags and provides added convenience, especially for those who have difficulty physically going to the store. Additionally, some online grocery shops offer "click and collect" or pickup services, where customers can order online and pick up their groceries at a designated location or drive-through.
8. **Avoiding crowds and queues:** Online grocery shopping enables customers to avoid crowded stores and long checkout lines. This is particularly beneficial during busy periods, holidays, or

times when physical stores may be overcrowded. Customers can shop comfortably without the hassle of navigating through crowded aisles or waiting in queues.

9. Accessibility for people with disabilities: Online grocery shops can be more accessible for individuals with disabilities or limited mobility. The convenience of shopping from home, coupled with the option for home delivery, ensures that people with disabilities can access essential groceries without the physical challenges of visiting a store.

Chapter 11: Conclusion & Future Work

11.1 Future Scope

- **Product Catalog Management:** This includes managing the inventory of products available for purchase on the website. It involves adding new products, updating existing product information (such as prices, descriptions, and images), and categorizing products for easy navigation.
- **User Registration and Authentication:** Users should be able to create accounts, provide necessary information (such as name, contact details, and delivery address), and securely authenticate themselves to access personalized features and make purchases.
- **Shopping Cart and Checkout Process:** Users should be able to add items to their shopping cart, view and modify the cart contents, and proceed to the checkout process. The checkout process typically includes selecting a delivery option, choosing a payment method, and providing relevant billing information.
- **Payment Gateway Integration:** The website should integrate with a secure payment gateway to enable users to make online payments. This involves handling payment processing, ensuring the security of sensitive payment information, and providing a seamless payment experience.
- **Order Management:** Once a purchase is made, the website should have a system in place to manage and track orders. This includes generating order confirmations, tracking delivery status, and providing relevant updates to users.
- **Delivery and Logistics Integration:** The website may integrate with a delivery and logistics system to facilitate the smooth processing and tracking of deliveries. This may involve coordinating with third-party delivery services or managing an in-house delivery team.
- **Customer Support and Communication:** The website should provide channels for users to contact customer support, ask questions, and resolve any issues related to their orders. This can include options like live chat, email support, or a dedicated customer support portal.

11.2 Conclusion

In conclusion, an online grocery shop website offers numerous advantages to both customers and businesses. It provides convenience, time-saving benefits, a wide product selection, and personalized experiences. Customers can shop from the comfort of their homes, compare prices easily, avoid crowds, and have groceries delivered to their doorstep. For businesses, an online grocery shop expands their reach, enables efficient inventory management, and opens up new avenues for customer engagement and loyalty.

The convenience and accessibility of online grocery shopping have become increasingly important, especially in a fast-paced world where people value their time and seek efficient solutions. With advancements in technology and the growing popularity of e-commerce, online grocery shops have become a preferred choice for many consumers.

However, it's important to continuously strive for improvement and keep up with evolving customer expectations. Regularly updating the website's features, optimizing the user experience, and staying responsive to customer feedback can ensure the online grocery shop remains competitive and delivers a seamless and satisfying shopping experience.

Additionally, as technology continues to advance, there are opportunities to explore new features such as mobile app development, personalized recommendations, integration with smart devices, and enhanced community engagement. By embracing these possibilities and staying at the forefront of innovation, an online grocery shop can stay ahead of the competition and cater to the evolving needs of its customers.

In summary, an online grocery shop website offers convenience, accessibility, and a wide range of products to customers while providing businesses with new growth opportunities. By continuously improving and adapting to changing customer demands, an online grocery shop can thrive in the digital marketplace and deliver exceptional value to its customers.
